

Northwest Plumbing Heating & AC Expands Winter Furnace Repair Services Across Quad Cities

May 26, 2026

DAVENPORT, Iowa - May 26, 2026 -
Northwest Plumbing Heating & AC has expanded its furnace repair and maintenance services throughout the Quad Cities region as temperatures drop and heating system demands increase. The century-old company has enhanced its service protocols and diagnostic procedures to address the surge in heating system issues that typically occur during colder months.

The expansion comes as industry data reveals that regular heating system maintenance can reduce emergency service calls by up to 40 percent while extending equipment lifespan by several years. The company has responded by implementing comprehensive diagnostic evaluations that include detailed assessments of refrigerant levels, electrical connections, condensate drainage systems, and air handler components.

"With winter temperatures settling in across the Quad Cities, we're seeing increased demand for both emergency repairs and preventative maintenance," said Bill Durand, Service Manager at Northwest Plumbing

Heating & AC. "Our enhanced diagnostic procedures help identify potential issues before they become costly emergencies, which saves homeowners both money and the discomfort of being without heat during cold weather."

The company's expanded services include 24-hour emergency availability for heating system failures, comprehensive furnace inspections, and installation of high-efficiency heating systems. Additionally, Northwest has introduced Service Partner Agreements starting at $99 annually, which include scheduled maintenance visits, priority service scheduling, and waived after-hours fees for emergency situations.

Beyond heating services, the company maintains its full range of plumbing solutions year-round, addressing common winter plumbing concerns such as frozen pipes, water heater failures, and drainage issues that can be exacerbated by cold weather conditions.

The timing of this service expansion aligns with seasonal patterns that show heating system failures peak during the first significant cold snaps of winter, when systems that have been dormant through warmer months are suddenly called into heavy use. Northwest's technicians report that many emergency calls could be prevented through proper seasonal maintenance and early detection of worn components.

To support homeowners facing unexpected repair costs, the company offers financing options through GreenSky, making system replacements and major repairs more accessible. The company has also developed educational resources and video tutorials to help homeowners understand basic maintenance tasks they can perform between professional service visits.

This recent news article highlights how Northwest Plumbing Heating & AC continues to adapt its services to meet community needs. Founded in 1923, the locally-owned company has served the Quad Cities area for over a century, establishing itself as a trusted provider of residential plumbing, heating, and cooling services. The company maintains its headquarters in Davenport, Iowa, and employs a team of certified technicians trained in the latest diagnostic and repair techniques for all major heating system brands and models.
