Charlotte Crawlspace Solutions Ready to Offer Odor Remediation Services for Indian Trail NC

May 18, 2022

May 18, 2022 - PRESSADVANTAGE -

Charlotte Crawlspace Solutions, a company based in Monroe, NC, wants everyone to know that they are ready to offer odor removal services for Indian Trail, NC and neighboring areas. This new service is for both residential and commercial clients and it is available not just in Monroe but also in neighboring areas, such as Rock Hill, SC, and Gastonia, Statesville, Winston Salem, and Salisbury, NC. The company has recently passed the stringent certification process under EnviroGuard Direct. The service is focused on removing pet odors, tobacco odors, pot odors, skunk odors, decomposition odors, fire damage odors, food odors, and chemical odors.

The company provides pet odors and pet urine smells with their exclusive EnviroGuard treatment that is applied by their team of professionals who are trained in identifying pet odors and then performing the treatment. Dogs have a natural secretion that has a very strong musky odor. Cats, meanwhile, tend to mark their territory outside the litter box with their urine. As bacteria decompose the components of the urine, a strong odor emerges, including the odor of mercaptans, which are the compounds responsible to the nasty

odor of skunk spray. Cat urine smell from the crawlspace is usually decaying organic matter located underneath the vapor barrier.

Cigarette and tobacco odors are some of the most pervasive odors in homes and commercial buildings, although smokers can't smell it. Smoke particles can be as small as 0.001 percent of the width of human hair, which explains why they can be so pervasive. It should be noted that third-hand smoke contains toxic gases and particles that can permeate both soft and hard surfaces. And nicotine can even get stuck on dust.

Pot or marijuana odors have a distinctive smell because of the terpenes found in cannabis. Terpenes are volatile aromatic compounds that make up the marijuana's essential oils. The terpenes are highly aromatic and when the smoke is inhaled, it has 20 times more ammonia in contrast to cigarette smoke. Thus, pot smoke is more likely to cling to particles in the air and get carried away rather than settling on various objects, such as carpets, drapes, and couches.

Skunk spray is an oily liquid that can permeate clothing and other object for several days. Skunks also spray in garages, basements, window wells, and under porches. Skunk musk contains a lot of thiols that contain sulfur, which accounts for the nasty smell.

And there can also be mold odors in the home, particularly during the summer months when there is a lot of moisture buildup in certain parts of the home. The mold spores and their discharged gases can permeate the home's living space via the "stack effect."

Meanwhile, certain chemicals in the home or building can cause unpleasant odors, such as: caulks, coatings and sealants; adhesives; wall coverings; paints, varnishes and/or stains; cleaning agents; carpeting; fuel and combustion products; vinyl flooring; fabric materials and furnishings; air fresheners and other scented products; and personal products such as shampoo, perfume, etc.

Food odors, especially in establishments that serve food like restaurants, may also need to be removed. Some pungent odors may linger long after the food has been eaten, such as curry because the oil vapor they emit may be absorbed by porous substances, such as clothes and curtains.

Charlotte Crawlspace Solutions, through their exclusive EnviroGuard treatment, has proven to be successful in getting rid of unpleasant odors in any home or commercial establishments, such as hotels, bed and breakfast, motels, hospitals, and elderly care facilities.
