Heavy Equipment Fleet Consultants Fleet Cost & Care Are Offering Software For Fleet Management

June 14, 2022

DETROIT, MI - June 14, 2022 - PRESSADVANTAGE -

Heavy equipment fleet consultants Fleet Cost & Care, are offering a fully-featured software suite for fleet management. Fleet Cost & Care is urging construction companies in Detroit, Michigan, and other parts of the country, to find out how its software can help them capitalize on the resurgence in the industry following the waning threat of the COVID pandemic.

There is a positive outlook for the construction industry all over the country. The Infrastructure Investment and Jobs Act that was passed in 2021 by the current administration with bipartisan support is just one of the reasons for this optimism. The bill allocated \$110 billion of new funds for roads, bridges, major projects, and more.

The construction industry is also in great shape as, according to Statista.com, construction spending has been rising steadily over the last decade. It was valued at almost \$1.5 trillion in 2020 and reached \$1.6 trillion in 2021. By 2025, the forecasts say, the construction industry will reach a total value of over \$2 trillion. This growth will be spread out over residential construction, non-residential construction, nonbuilding construction, highway and street construction, and other ventures.

It is expected that construction and construction-adjacent businesses in major metropolises, such as Detroit, can expect a significant uptick in revenue over the next 5 years. However, it is equally important for businesses to upgrade their infrastructure and services to be able to grab these opportunities and not lose out to their competitors.

A spokesperson for Fleet Cost & Care talks about the importance of being on the cutting edge of fleet management by saying, "The future is bright for construction. Businesses are going to need fleets of heavy equipment vehicles to facilitate their construction projects. When these clients approach your company that offers construction vehicle rentals, you need to show them the proof that your operational efficiency, use of field technology (such as GPS), worker reliability, and fuel usage efficiency are top-notch. Improving on these metrics will enable you to deliver services at a competitive cost that undercuts local rivals in the industry. To ride the upcoming wave in the construction industry, you must begin working on these parts of your business right now to be able to hold a candle to your competition. Fleet Cost & Care's suite of apps for construction vehicle fleet management is the ideal solution for heavy equipment rental businesses to dramatically improve their processes and increase profitability across the board."

Fleet Cost & Care's software products are designed to solve the most critical business problems that construction companies and contractors who manage a fleet of vehicles regularly face. The company's solution is the combination of its NexGen and Atom software. The former is the company's desktop software suite while the latter is made for mobile devices. So, a construction company's office staff can rely on NexGen for their work while those in the field can use Atom to fulfill their responsibilities. The apps sync information with each other so that each team knows what the other is working on. Each stakeholder always gets the latest, most updated data. This solves the major challenge of coordinating information between disparate teams who work at different locations and often have tangential priorities but need to work on the same underlying data.

The company's software can be used by businesses in a wide range of industries such as crane and heavy equipment rentals, excavating and earth moving, construction, concrete piping, environmental cleanup, commercial vehicle fleets, and more. For crane and other heavy equipment rental companies, Fleet Cost & Care claims that its software can be used to "improve internal operations and employee efficiency, streamline job scheduling, quoting, and billing, all while saving time, improving accuracy, increasing revenue, and maintaining safety and compliance."

Business owners who offer heavy equipment, construction vehicles, or any other kinds of commercial vehicles for rent can contact Fleet Cost & Care in Detroit, Michigan, at (800) 281-9445 or head over to

its website to schedule a free demo of its software suite.
