

Mansfield Cosmetic Surgery Center Suggests Xeomin Injections Instead Of Botox

March 31, 2023

Mansfield, Texas - March 31, 2023 - PRESSADVANTAGE -

Mansfield Cosmetic Surgery Center, based in Mansfield, Texas, recently released an article about Xeomin injections as an alternative to Botox. Led by Dr. Michael L. Thornton, the center specializes in various cosmetic procedures, such as Facial Plastic Surgery, Breast Cosmetic Surgery, Body & Buttock Contouring, SculpSure® Non-Invasive Fat Reduction, Male Cosmetic Surgery, Non-Surgical Aesthetics, and more.

According to Mansfield Cosmetic Surgery Center, Xeomin injections is a simple procedure that takes only 10 minutes and temporarily eliminates forehead lines and wrinkles, frown lines, and crow's feet, providing a more youthful appearance to the upper face. Xeomin is another form of botulinum toxin type A (incobotulinumtoxin A) that is very similar to the botulinum toxin molecule found in Botox, but can be better for some patients.

Xeomin is specifically manufactured through a unique and precise process that isolates the botulinum toxin molecule and removes all extra surrounding proteins. This process produces a more purified and cleaner molecule, which reduces the chance of the patient's body developing resistant antibodies against the

botulinum toxin, rendering the product ineffective. Unlike Botox, Xeomin's pure toxin has the potential to work faster and last longer.

Dr. Thornton recommends Xeomin as an alternative to Botox, especially for patients who may develop an immunity to Botox or find that Botox may not last as long. Xeomin is performed as a quick, in-office procedure, with results typically lasting 3 to 4 months. Following a Xeomin injection, patients will see results in 14 days or less, with some patients reporting seeing results in about a week. In most cases, Xeomin will last up to four months, and regular treatments are recommended to maintain optimal results.

Mansfield Cosmetic Surgery Center has been offering Xeomin since 2008 to patients in Mansfield, Arlington, Fort Worth, and surrounding cities in the DFW metroplex. Dr. Michael L. Thornton is a double board-certified cosmetic surgeon and Diplomate of the American Board of Cosmetic Surgery, who is expertly qualified to perform Xeomin injections and is currently available for Xeomin consultations.

Patients who have undergone cosmetic treatments at Mansfield Cosmetic Surgery Center have praised Dr. Thornton and his team for their professionalism, attentiveness, and compassion. Patients can schedule a consultation by calling the office or visiting the Mansfield Cosmetic Surgery Center website.
