

Cyprus Plastic Surgeon Explains Benefits Of Facelift In Cyprus

July 24, 2023

Nicosia, Cyprus - July 24, 2023 - PRESSADVANTAGE -

The Nicosia, Cyprus based European Institute of Plastic Surgery is taking steps to highlight the benefits of undergoing a facelift in Cyprus. The clinic provides a range of aesthetic treatments such as body surgery, breast surgery, facial surgery, and skin surgery, approaching each of their patients with the utmost respect, care, and compassion to make them feel secure, comfortable, and confident.

Dr. Demetris Stavrou, owner and founder of the European Institute of Plastic Surgery, says, "Our face is an integral part of our identity, and it plays a role in everything we do. It is how we connect with people, it is how we project ourselves, and it is the part of the body that always attracts attention. Unfortunately, aging can wreak havoc in our faces, and it can lose its elasticity and volume and develop wrinkles, folds and skin sagging to our face and neck. These are all issues that can adversely affect our self-confidence and how attractive we feel. Thankfully, there is a solution for this: facelifts."

As the European Institute of Plastic Surgery explains, custom plastic surgery can be the key to unlocking a

naturally younger look for the face and neck by improving the most visible signs of aging. Using his extensive understanding of the facial aging process, Dr. Stavrou performs deep plane facelift procedures that meet and exceed his patients' expectations in Cyprus, Greece and Malta.

A facelift is also known as a rhytidectomy. The procedure is able to reduce the signs of aging on the face and neck by tightening loose skin, and it helps patients achieve a more rested, youthful appearance while maintaining their natural appearance. The science and technology behind cosmetic surgeries have been groundbreaking over the past few years. With new, modern techniques and advances in fat transfer, successful, natural facelifts are easier than ever before. Learn more at European Institute of Plastic Surgery's Facebook page.

The benefits of facelift includes fewer wrinkles, improvement of sagging skin, restoration of a youthful look, better skin quality and tone, natural-looking appearance, round and smooth cheeks, improvement of deep folds between the mouth and cheeks, defined neck and jowls, and more. Naturally, the restoration of their youthful looks will also have an impact on patients' self-confidence and self-esteem.

At the European Institute of Plastic Surgery, the facelift procedure is carried out in three steps. The first procedural step is general anesthesia performed by a board certified anesthesiologist. This process will have the patient sleeping throughout their facial rejuvenation surgery. Second, the plastic surgeon will use incisions located just behind the hairline, starting near the temples, and following the hairline down to the ear, around the earlobe, and into the lower scalp to lift the facial skin, reposition the deeper facial tissues, and remove excess skin. After that, the surgeon will tighten the surrounding muscles to create a firmer foundation for the skin, utilizing the long lasting technique of a deep plane facelift. The remaining skin is gently laid back over the newly rejuvenated facial tissues, giving the face a smoother, more youthful contour without over-tightening the skin.

Once the main part of the procedure is done, the incisions are closed, with exceptional attention to detail, using sutures. Due to their carefully chosen locations, the incision lines are able to hide within the hairline and in the natural contours of the ear and face. The European Institute of Plastic Surgery states that this facelift procedure is suitable for both men and women. The results are long-lasting, with the appearance presenting at least 10 years younger.

Dr. Demetris Stavrou is a board-certified Plastic Surgeon who has led the European Institute of Plastic Surgery since 2012. He was trained in top Medical Institutions in Greece, UK, Australia and Israel. He has extensive experience in facelifts and an artistic eye. He uses the most advanced surgical technology and medical consumables and employs a combination of traditional and modern techniques. For Dr. Stavrou, paying attention to the details is what makes the difference in a facelift plastic surgery.

The European Institute of Plastic Surgery website contains more information about the facelift procedure and many other services. Dr. Demetris Stavrou encourages interested parties to get in touch with him directly via phone or email for any questions, concerns, or clarifications. The European Institute of Plastic Surgery maintains a social media presence on Facebook, Twitter, Instagram, YouTube, and LinkedIn.
