

Tamassios Orthodontics Fixes People's Smiles With The Revolutionary Invisalign System

February 25, 2023

February 25, 2023 - PRESSADVANTAGE -

Nicosia, Cyprus: Tamassios Orthodontics is renowned for its unbeatable orthodontic care and innovative Invisalign treatment at competitive prices. This groundbreaking treatment is considered one of the best alternatives to metal braces and gives patients a much more comfortable journey through their orthodontic experience.

It is estimated that one out of every four orthodontic patients is an adult, as reported by the American Association of Orthodontists (AAO). Invisalign has catered to more than 1.5 million customers within the last few years, with a generous portion being adults aged 18 and up. As the population of teens and adults seeking orthodontic care continues to grow, Tamassios Orthodontics is proud to offer Invisalign as a safe and convenient solution for patients of any age.

The Invisalign treatment consists of removable, transparent, unnoticeable aligners that subtly adjust the teeth over time. The custom-made aligners offered by Tamassios Orthodontics are made from SmartTrack

material, which provides 75% predictable tooth movement and allows for a smooth and comfortable transition from one aligner to the next. The aligners are designed specifically for each patient's needs and treatment plan to achieve a beautiful smile in the shortest amount of time.

Through a virtual treatment plan generated by ClinCheck technology software, the experienced professionals at Tamassios Orthodontics are able to assess the patient's teeth and show the projected movements of their teeth throughout the treatment. An accurate visual representation of the treatment journey will help patients understand their plan and ensure they are satisfied with the progress.

Unlike metal braces, with the Invisalign system, patients can eat whatever they want during the treatment because they can remove their aligners to eat and drink. This also makes it easier to brush their teeth and use dental floss after each meal to maintain proper oral hygiene," says Dr Michalis Tamassios, founder of Tamassios Orthodontics.

These advantages, combined with Tamassios Orthodontics' commitment to excellence and patient satisfaction, make it the perfect choice for those who wish to have their teeth straightened without all the bulky metal, wires and brackets. The importance of modern orthodontics can't be emphasised enough. That's why Tamassios Orthodontics ensures adults and children have access to better treatments, like Invisalign, whenever they need them.
