

Cyprus Laser Hair Removal Available At EIPS

January 12, 2024

Nicosia, Cyprus - January 12, 2024 - PRESSADVANTAGE -

Nicosia, Cyprus based European Institute of Plastic Surgery (EIPS) is pleased to announce that they are now offering a new laser hair removal service. With surgical and medical offices in Nicosia, Limassol, Athens, and Sliema, the European Institute of Plastic Surgery has established itself as a high quality provider of aesthetic treatments that include body surgery, breast surgery, facial surgery, and skin surgery for patients from all over the world.

Dr. Demetris Stavrou from EIPS says, "Shaving and waxing every so often to try and keep your body hair under control can be a tiring and annoying process. Anyone who has been shaving and waxing would be quick to tell you that everything can be so much smoother if there was a long-term alternative. Laser hair removal is that procedure. It is a popular, safe and highly effective way to achieve permanent or long-term hair removal on the face, legs, arms, underarms, back, and the bikini line. We are pleased to announce that we are now providing laser hair removal services."

Laser hair removal uses highly concentrated beams of light, generated by a specialized laser device, to target and eliminate hair follicles, preventing future hair growth. This cutting-edge cosmetic procedure reduces or

eliminates unwanted hair growth on various parts of the body effectively and semi-permanently making it the perfect choice for anyone seeking smooth, hair-free skin.

While laser hair removal works most effectively on people with fair skin and dark, coarse hair (because the contrast between hair and skin color maximizes the laser's targeting accuracy), advancements in technology have made it possible to treat individuals with various skin tones. Most people will require multiple treatment sessions to address hair follicles in their active growth phase. EIPS says that the exact number of sessions varies depending on individual factors and the treated area.

EIPS also comments that laser hair removal is a revolutionary approach for a number of reasons. The first (and most obvious) of these is the fact that it provides a lasting solution to unwanted hair growth, resulting in reduced or eliminated hair in treated areas. Compared to traditional methods like shaving or waxing, laser hair removal delivers longer-lasting results, reducing the need for frequent maintenance and saving time.

Laser hair removal is also very versatile, being suitable for both men and women, and it can be performed on various body parts, including the face, legs, underarms, bikini area, and back. The fact that it can be precisely targeted means that the procedure minimizes the risk of skin irritation. In a similar vein, when performed by trained professionals using FDA-approved devices, laser hair removal is considered safe, with minimal side effects. Anyone considering undergoing laser hair removal can expect a fairly straightforward and non-invasive procedure. First, the treatment area is cleansed, and both the patient and the practitioner wear protective eyewear. Then, the laser device is applied to the target area, emitting short bursts of laser energy. During this procedure, patients may experience a mild burning sensation, which is often described as feeling like a rubber band snapping against the skin. After the session, the cosmetic specialist will apply smoothing cream on the treated area. EIPS points out that it is common to see some redness and mild swelling in the area, but these effects will usually subside within a few hours or days.

Dr. Demetris Stavrou is a board-certified Plastic Surgeon who has led the European Institute of Plastic Surgery since 2012. He was trained in top Medical Institutions in Greece, London, and Israel. He has extensive experience in all forms of plastic surgery and an artistic eye that allows him to help his patients attain their perfect vision of themselves. He and his team at EIPS use the most advanced surgical technology and disposables and employ a combination of traditional and modern techniques to provide the best results.

The European Institute of Plastic Surgery website offers more information about their brand new laser hair removal procedure, along with many other services. Dr. Demetris Stavrou encourages interested parties to

get in touch with his office directly via phone or email for any questions, concerns, or clarifications. EIPS can also be found on Facebook, Twitter, Instagram, YouTube, and LinkedIn.
