

Concrete Coating Contractor Launches Showroom in Holland, Ohio, Offering Cutting-Edge Polyaspartic Floor Solutions

January 23, 2024

Holland, Ohio - January 23, 2024 - PRESSADVANTAGE -

Holland, OH - LYNX Concrete Coatings, a newly founded company in Perrysburg, OH, is excited to announce the launch of their innovative polyurea concrete floor coatings. This new advanced technology is 4X stronger than traditional epoxy methods, allowing homeowners to enjoy durable, long lasting floor finishes that completely transform spaces and help reclaim their use for enjoyment.

Homeowners that are tired of unfinished, worn-out concrete that in many cases shows staining, efflorescence, spalling, pitting and cracks - now have access to the best concrete flooring solution on the market. These new, industrial strength floor coatings offered by LYNX provide a custom solution making epoxy applications, especially outdoors, completely obsolete. Upgrading with LYNX means homeowners can now refinish their concrete with high quality, durable material that is slip resistant, scratch and dent resistant, easy to clean and UV stable meaning the floor retains its color for years to come. Homeowners can also choose from a variety of beautiful floor finishes that even compliment or match the home's exterior fascia of brick or stone.

Adam Reed, co-founder of LYNX Concrete Coatings, stated, "Everything we do at LYNX centers around a first-class home improvement experience and 100% customer satisfaction. The reviews and feedback from customers have been nothing short of amazing. What I love most about the business model is just the complete transformation of a space from one day to the next - and then of course the reaction from homeowners once the project is complete. They truly can't believe the difference. The reality of it is, most folks use the garage as the main entry to their home and in many cases, it's not a space they're particularly proud of. At LYNX, our purpose is to help make that space feel like an extension of the home."

LYNX Concrete Coatings enhance all types of concrete surfaces: garage floors, pole barns, patios, porches & walkways, pool decks, and commercial space.

The company has chosen to be a polyaspartic concrete coating contractor because of the advantages of polyurea and polyaspartic concrete coatings over epoxy coatings. Epoxy concrete coatings have long cure times, taking as long as a week to cure, which means the space cannot be used for that long. For instance, when repairing the garage floor, homeowners will not be able to park their cars in the garage until such time that the epoxy concrete coating has cured. On the other hand, if polyaspartic concrete coating is used, the longest wait will be two to three days before the homeowner can park their car in the garage again.

The high quality of their services is proven by the five star reviews they have received. For instance, Kurt F. had recently given them a five star rating and said, "I am so impressed with the service I received from Lynx Concrete Coatings. The workers were friendly, very thorough, and highly professional, and they explained the coating process as they performed each task. For our garage project, we had three to four workers put in long hours during the less-than-two-day process, and they were helpful in moving a refrigerator out of my garage and wrapping it up to protect it from freezing temperatures and snow. Kudos to owners James Millsaps and Adam Reed. They have a winner with Lynx Concrete Coatings. I sincerely recommend Lynx because this company transformed my ugly garage floor into a showpiece."

In another five-star review, Jeff L. said, "Most friendly and professional contractors I have ever worked with. They know their stuff and did an amazing job on our garage floor."

With over 25 years of experience in the home improvement sector, LYNX Concrete Coatings provides specialized expertise in advanced concrete coatings. LYNX is committed to delivering long-lasting, high performance concrete floor solutions to upgrade and transform residential and commercial spaces. As the company continues to grow and expand, they look forward to also providing services to customers in Michigan, Indiana, Pennsylvania and beyond.
