

Egozi Plastic Surgery Center Now Offers SculpSure Fat Removal Procedure

January 07, 2016

January 07, 2016 - PRESSADVANTAGE -

Dr. Eric Egozi of Egozi Plastic Surgery Center, a surgeons office based in the Tampa Bay, FL area, is proud to announce that they now offer the SculpSure laser fat removal procedure. This procedure is completely new and Dr. Egozi will be the reference center for the Tampa, Clearwater, St. Petersburg FL area. Dr. Egozi wants to highlight that he will donate a portion of the proceeds from all SculpSure procedures completed during February 2016 to a local food bank. Having a reputation as one of Tampa Bay's best plastic surgeon, people are already expressing an interest in the new SculpSure procedure.

"SculpSure is a non-invasive laser procedure that helps with fat removal," says Dr. Egozi, "It is one of the most innovative techniques out there at present, and very few offices in the entire country offer it. We are very proud to be leading the way, therefore, which is something that our office has always been committed to doing."

During a SculpSure procedure in the Tampa location, patients will be treated with a heat-inducing laser. It can target areas such as the flanks, abdomen and more and it is known to be a very effective technique. It uses revolutionary new hyperthermic 1060nm laser technology, which is what makes it noninvasive and avoids the

need for a recovery period. It takes around 25 minutes for the procedure to be completed, at which point the body will start to release fat cells. Full results tend to be visible between 6 and 12 weeks after treatment. No discomfort is associated with the procedure, which means patients do not experience any downtime either.

Dr. Eric Egozi is one of Tampa's top plastic surgeons and his Clearwater office has been selected by Cynosure as a Luminary Center for SculpSure®. He is a nationally recognized expert in cosmetic surgery, and is one of an exclusive initial group of plastic surgeons to offer SculpSure®.

"SculpSure is FDA-approved and clinical trials have shown that it is an effective and safe form of fat reduction treatment," adds Dr. Egozi. "Because it is a non-invasive form of treatment, it eliminates most of the risks and complications that accompany invasive or less invasive lipolysis treatment. It contributes to SculpSure's effectiveness and comfort."

At the same time, Dr. Egozi does want to make sure that people understand that these procedures should be used as part of a healthy lifestyle that focuses on both diet and exercise. Those who are ready to commit to that are encouraged to find out more about SculpSure at Egozi Plastic Surgery Center.
