

Desert Cardiovascular Consultants Expands Advanced Cardiac Care with Interventional Services in Las Vegas

July 23, 2024

July 23, 2024 - PRESSADVANTAGE -

Desert Cardiovascular Consultants, a comprehensive Cardiac and Vascular Care Center, has announced the expansion of its services. Under the leadership of Dr. Zia Khan, MD, FACC, FSCAI, who has over thirty years of experience in the field, the center aims to enhance patient care throughout the region.

Dr. Zia Khan is known for his compassionate and attentive approach to care. His practice, based in Las Vegas, offers a wide range of treatments for heart and vascular conditions. His service options are available for Coronary Artery Disease, vascular interventions, varicose vein treatments, cardiac diagnostic testing, and peripheral artery disease treatment in Nevada.

One of Desert Cardiovascular Consultants' key features is its state-of-the-art, office-based catheterization lab. Dr. Zia Khan performs advanced procedures on peripheral vasculature, both arteries and veins, such as balloon angioplasty, stenting, atherectomy, and intravascular imaging. These interventions target blocked or narrowed arteries / incompetent veins and offer patients quicker recovery times without the hassle and red tape of a hospital visit.

“Providing comprehensive and advanced cardiac and vascular care is our primary goal,” says Dr. Zia Khan. “Our expanded interventional services enable us to offer cutting-edge solutions for complex heart and vascular conditions.”

Anthony Jorgensen, MSHA, a senior manager of the practice, highlights the significance of the recent advancements. “By expanding our interventional cardiology services to an outpatient basis, we are enhancing the care our patients receive. This investment in advanced technology showcases our commitment to delivering the highest quality cardiac and vascular care in Las Vegas.”

Peripheral Artery Disease (PAD) affects blood flow to the extremities, causing symptoms such as leg pain, numbness, and non-healing sores. Desert Cardiovascular Consultants provides various state-of-the-art solutions, from lifestyle changes to interventional procedures, to effectively treat PAD and prevent serious complications, such as ulcers and amputations.

Varicose veins are enlarged and twisted veins often found in the legs and feet that cause discomfort. These treatments are designed to alleviate symptoms, prevent complications, and improve quality of life. DCC has the very latest treatment for vein ablations and sclerotherapy.

The practice prides itself on a patient-first approach with dedicated and responsive staff that ensures each patient receives the utmost compassionate care. DCC accepts a multitude of insurance providers and offers convenient online correspondence.

“Our team is dedicated to providing high-quality care tailored to each patient’s unique needs,” says Anthony Jorgensen. “From initial diagnosis to complex interventional procedures, we support our patients every step of the way.”

Las Vegas Valley residents searching for a reliable vascular doctor will find Desert Cardiovascular Consultants a trustworthy option. The office-based environment uses advanced technology and offers a broad range of services, making it a comprehensive choice for those facing heart and vascular issues.

The expertise of their team, combined with the overall advanced facility, positions Desert Cardiovascular Consultants as a leading provider of Cardiac and Vascular care in Las Vegas. Unlike other cardiology practices, DCC provides interventional services, mainly on an outpatient basis.
