Sound Vascular & Vein Introduces Minimally Invasive Hemorrhoid Artery Embolization for Long-Lasting Relief

December 04, 2024

December 04, 2024 - PRESSADVANTAGE -

Seattle, WA ? Sound Vascular & Vein, a leading vascular care center based in Seattle, WA, is proud to announce the availability of Hemorrhoid Artery Embolization (HAE), an innovative, minimally invasive treatment option for patients suffering from chronic and severe hemorrhoids. This advanced procedure offers an effective alternative to traditional surgical approaches, providing significant relief with reduced recovery time and minimal discomfort.

Hemorrhoids are a common and often disruptive condition that affects millions of people, leading to symptoms such as pain, discomfort, bleeding, and irritation. Conventional treatments, including banding, topical medications, and invasive surgery, may offer relief but are frequently associated with extended recovery periods or recurring symptoms. Hemorrhoid Artery Embolization represents a breakthrough solution, targeting the root cause of hemorrhoids and offering patients a more modern, less invasive treatment option.

?We are thrilled to offer this innovative procedure to our patients,? said Dr. Aparna Baheti, a partner at Sound Vascular & Vein. ?Hemorrhoid Artery Embolization is a game-changer for individuals seeking long-term relief from hemorrhoids. It?s safe, highly effective, and allows patients to return to their normal routines

quickly. At Sound Vascular & Vein, we are committed to offering advanced, patient-focused care, and HAE is a perfect example of that.?

Hemorrhoid Artery Embolization is a minimally invasive outpatient procedure performed by experienced vascular specialists. Using image-guided technology, a small catheter is directed to the arteries supplying blood to the hemorrhoids. Tiny particles are then injected to block blood flow to the hemorrhoidal tissue, leading to reduced swelling, bleeding, and discomfort over time. By addressing the condition at its source, HAE reduces the risk of recurrence and offers long-lasting results.

Key benefits of Hemorrhoid Artery Embolization include:

Minimal discomfort compared to traditional surgical options, with most patients experiencing only mild soreness post-procedure. No incisions or stitches significantly lower the risk of complications and infections. Faster recovery, enabling patients to return to their daily activities quickly, often within a day or two. High success rates in reducing or eliminating symptoms, improving overall quality of life.

Sound Vein & Vascular: Seattle's Top Choice

Sound Vascular & Vein is a trusted leader in vascular care, recognized for its expertise in minimally invasive treatments and dedication to personalized patient care. The team combines advanced technology with compassionate service to deliver the best possible outcomes for each individual. Patients seeking Hemorrhoid Artery Embolization at Sound Vascular & Vein can expect:

Comprehensive evaluations to determine whether they are candidates for the procedure. Care from board-certified vascular specialists with extensive experience in embolization techniques. A supportive environment designed to prioritize patient comfort and ease throughout the treatment process.

Comprehensive Vascular Care in Seattle

In addition to Hemorrhoid Artery Embolization, Sound Vascular & Vein offers a wide range of advanced treatments for vascular and venous conditions, including uterine fibroid embolization, prostatic artery embolization for BPH, genicular artery embolization for osteoarthritis knee pain, and therapies for Peripheral Artery Disease (PAD), Deep Vein Thrombosis (DVT), and Pelvic Congestion Syndrome (PCS). These minimally invasive procedures provide patients with innovative alternatives to surgery and are tailored to meet individual needs.

“Our goal is to provide solutions that enhance the quality of life for our patients,” added Dr. Baheti. “With Hemorrhoid Artery Embolization, we’re empowering individuals to regain their confidence and live free from the discomfort of chronic hemorrhoids.”
