

London Residents Schooled in Types Of Boilers

January 19, 2016

January 19, 2016 - PRESSADVANTAGE -

London, UK, JAN 16, 2016 ? Boiler replacement, when it is necessary, is easier when one is knowledgeable about which of the three types of boilers is required. In order to help London residents, LB Plumbing and Heating (www.lbplumbingandheating.com) has just published a new blog post authored by Ray le Blanc entitled 'Boiler Installation in London: Three Boiler Types and Their Benefits.'

The article discusses that 'there are three leading boiler types, namely, combination, system, and conventional.' It goes on to mention that 'the most frequently used in the U.K. is the combination (or combi) boiler, which is fuelled by either electricity or gas. Its efficiency in providing central heating and hot water simultaneously without using any tanks or cylinders makes it popular.'

?With combi boilers, residents get to enjoy an infinite supply of hot water for their baths or showers whenever they desire, as well as consistent heat throughout the house,? stated Ray, the owner of LB Plumbing and Heating. ?Since combi boilers don?t utilise tanks, the system also takes up limited space in the home, allowing for flexibility in home layout and renovation.?

The article further discusses 'the system boiler or sealed system has a water cylinder but does not maintain a water tank.' It further mentions that 'System boilers are capable of providing hot water for different sources

simultaneously, making it suitable for large families or households. Due to the nature of the system, which requires hot water storage, heating the water for direct use or for centralised heating isn't instantaneous. The supply of hot water is also limited, requiring the system some time to produce hot water again.'

Lastly, the article discusses how 'Conventional boilers or open vent/regular boilers work much like system boilers in that they have a cylinder. The only difference is it has a cold water tank and a separate feed, which are usually housed in the loft'.

Regardless, every boiler requires proper inspection, maintenance, repair or replacement. LB Plumbing and Heating under Ray Le Blanc has been in business for several years. They offers free quotes with no obligation or a hard sell. They work within North London, U.K., including Kensal Green, Cricklewood, Hampstead, Muswell Hill, Willesden, Stanmore and the surrounding areas.
