

SOM Aesthetics Introduces Revolutionary Tixel Device for Cutting-Edge Skin Rejuvenation

February 27, 2025

February 27, 2025 - PRESSADVANTAGE -

SOM Aesthetics is excited to announce the arrival of the Tixel device, a new technology in skin rejuvenation now available to their clients. Known for being at the forefront of cosmetic innovation, SOM Aesthetics is expanding its list of services, focusing on the latest advances in cosmetic dermatology. Learn more about their offerings and innovative approach on their website. This addition reflects their commitment to offering treatments that are not only effective but also less invasive.

The Tixel device, now part of SOM Aesthetics' offerings, uses a thermo-mechanical action to address a variety of skin issues. It's great for improving skin texture, minimizing wrinkles, and dealing with pigmentation. What makes Tixel stand out is that it delivers results similar to laser treatments but with significantly less downtime. This makes it an appealing choice for those looking for San Diego cosmetic dermatology treatments.

"SOM Aesthetics is always on the lookout for the latest technological advancements to improve patient

outcomes," said Dr. Saami Khalifian of SOM Aesthetics. "Tixel is a significant breakthrough in skin rejuvenation, providing the right mix of effectiveness and safety, which is central to our mission."

Besides its technological perks, Tixel gives patients a comfortable experience with little discomfort during and after the treatment. This matches SOM Aesthetics' focus on prioritizing patient care while ensuring excellent results. Patients using Tixel can expect improvements in skin firmness and elasticity, which contribute to a younger-looking appearance.

The introduction of Tixel responds to the increasing demand for treatments that have minimal recovery time without sacrificing effectiveness. As more people look for these kinds of procedures, SOM Aesthetics positions itself as a leader by offering advanced treatments that cater to modern needs.

Dr. Khalifian said, "Adding Tixel to our practice helps us address the diverse needs of our clients. We're thrilled about the potential it offers for transformational results and how seamlessly it fits into our broad range of services."

Anyone interested in exploring how Tixel can address their skin concerns is encouraged to book a consultation with SOM Aesthetics. During these consultations, professionals will provide personalized assessments and detailed information about the procedure, helping clients make informed decisions about their skincare plans.

SOM Aesthetics is also venturing into new aesthetic treatments, such as energy devices, which complement their existing services. This expands the clinic's capabilities, offering comprehensive solutions for various skin issues. For more insight into these new treatments, visit their news and updates section on their website.

SOM Aesthetics is a go-to place for people looking for advanced treatments and state-of-the-art technology in this field. By constantly updating their services, they maintain a high standard of care and innovative options. This dedication solidifies their reputation as a top destination for those wanting to enhance their appearance using safe and effective cosmetic procedures.

The incorporation of Tixel into SOM Aesthetics' services highlights their commitment to staying at the leading edge of cosmetic dermatology. By offering the latest technologies, the clinic ensures that clients get the best results tailored to their specific needs.

SOM Aesthetics encourages anyone interested in Tixel or other services to book a consultation via their easy-to-use online platform. Through these interactions, the team focuses on ensuring clients have all the

information they need and receive personalized care, consistent with their principles of transparency and patient-centered service.
