

## **New Book On Ehlers-Danlos Syndrome Released**

*February 23, 2016*

February 23, 2016 - PRESSADVANTAGE -

Muldowney Physical Therapy, a clinic in Cranston, RI, is proud to announce that their founder and owner, Kevin Muldowney, has released a new book. The book, "Living Life to the Fullest with Ehlers-Danlos Syndrome: Guide to Living a Better Quality of Life While Having EDS", has been designed to help people who suffer from this condition to live a happier, healthier life. Physical therapists are able to access a full chapter of the book for free to determine whether it would be beneficial in their own clinics. Those who suffer from EDS can access five free exercises in the book, designed to help them live life to the fullest by achieving EDS pain relief.

Kevin Muldowney himself says: "I have been treating people with EDS since 2005. As a physical therapist, I have developed an exercise protocol to help stabilize the many joint subluxations/dislocations associated with this genetic disorder. My book is intended for people diagnosed with the condition, as well as for physical therapists who treat people with the said condition."

The book has been changing people's lives. Muldowney is world-renowned for his treatments, as people fly to see him from all over the world in the hopes of finding relief from EDS. "People are accessing the free reports in droves and then purchasing the full EDS book on Amazon and immediately contacted me to make an appointment," adds Muldowney. "I am so happy to be able to play a part in improving the quality of life of

people from various parts of the globe."

The book has only recently been released, but it has taken the world by storm. This is in part due to the fact that Muldowney is one of the few EDS specialists in the world. This means that sufferers and those who provide treatment always look forward to any new information he releases. "This book was written by my physical therapist, Kevin Muldowney, who is one of the only PTs in the country to specialize in Ehlers-Danlos. (Seriously, EDSers drive in from out of state to see him.)," says Rachel S. "Unlike physical therapists who give you a 'cookie cutter' set of exercises designed for people with normal collagen, he became an expert at treating EDS bodies by systematically examining a substantial number of EDSers over long time periods, as he slowly added in exercises he developed specifically with EDS biomechanics in mind."

Further information is available through Muldowney's website at [www.muldowneypt.com](http://www.muldowneypt.com).
