

The Future of Feeding Plants Is Here: Modern Sprout Launches Seaweed-Based Dissolving Fertilizer Sheets

August 18, 2026

Chicago, Illinois - August 18, 2026 -
Modern Sprout has introduced a new approach to plant nutrition with dissolving plant food sheets made from seaweed, offering gardeners a plastic-free alternative to traditional liquid and powdered fertilizers. The product represents a shift toward more sustainable plant care solutions by utilizing seaweed, a regenerative material that grows without fresh water or arable land while capturing carbon during its growth cycle.

The dissolving sheets are manufactured in the United States and designed to eliminate the mess and measurement challenges associated with conventional plant fertilizers. Each pre-dosed sheet dissolves completely in water, with one pack creating up to 20 gallons of plant food suitable for both indoor and outdoor applications.

"Seaweed has been used in agriculture for centuries, but the dissolving sheet format brings this natural fertilizer into a convenient form that modern gardeners can easily incorporate into their routines," said Nick Behr of Modern Sprout. "The sheets deliver essential trace minerals that support steady, healthy plant growth

while addressing the environmental concerns many gardeners have about plastic packaging and synthetic fertilizers."

The product addresses several challenges faced by home gardeners. Traditional liquid fertilizers often result in spills and require careful measurement, while powdered versions can create dust and uneven mixing. The sheet format eliminates these issues while providing consistent nutrient delivery to houseplants, flowers, fruits, and vegetables.

Seaweed cultivation requires no freshwater resources or agricultural land, distinguishing it from many conventional fertilizer ingredients. As the seaweed grows, it naturally captures carbon from the atmosphere, contributing to its environmental benefits. The harvesting and processing methods preserve the trace minerals that make seaweed particularly effective for plant nutrition.

The dissolving sheets are odorless and leave no residue, making them suitable for indoor use where traditional fertilizers might create unwanted smells. The pre-measured format also helps prevent over-fertilization, a common problem that can damage plants and contribute to nutrient runoff.

Modern Sprout developed the product as part of its broader commitment to making gardening accessible and sustainable. The company has built its reputation on innovative growing solutions that simplify the gardening experience for both beginners and experienced plant enthusiasts.

The launch comes as more consumers seek environmentally conscious alternatives for home and garden care. The gardening industry has seen increased interest in products that reduce plastic waste and utilize renewable resources, particularly among younger demographics embracing indoor gardening.

Modern Sprout specializes in indoor and outdoor gardening solutions, offering grow kits, seed collections, plant care products, and gardening accessories. The company focuses on beginner-friendly products designed to make gardening accessible to all skill levels. Known for its commitment to sustainability, Modern Sprout develops eco-friendly products that support successful growing experiences while minimizing environmental impact. The company's product line includes everything from herb and vegetable grow kits to specialized grow lights and innovative candles that transform into planters.
