Expanding Horizons: Trusted Pool & Spa Revolutionizes Custom Pool Solutions

August 14, 2026

August 14, 2026 -
Trusted Pool & Spa announces an expansion of its custom pool design and construction services for homeowners in Lakewood Ranch. The company's services include custom pool planning, 3D design visualization, pool installation, outdoor living features, and equipment options. Trusted Pool & Spa has served residential and commercial clients in Sarasota and Manatee Counties since 2010.

The expansion gives local homeowners access to a design-build process that begins with a consultation and site analysis. The company evaluates factors such as property layout, available space, budget, and intended pool use before developing a design. Its Lakewood Ranch custom pool service also uses 3D design technology to show proposed features and allow design adjustments before construction begins.

Available custom features include infinity edges, tanning ledges, swim-up bars, integrated spas, LED lighting, natural stone finishes, waterfalls, bubblers, and smart pool controls. Equipment options include pumps, filtration systems, heating systems, covers, and cleaning equipment. Availability and specifications can vary by project, so customers can discuss individual features during the planning process.

The company also handles the construction process after the design is approved. Its stated process includes material selection, permitting and scheduling, excavation, plumbing, framing, surfacing, equipment installation, and a final walkthrough. Trusted Pool & Spa says it obtains required permits as part of its pool construction services.

Project planning can also account for the surrounding landscape and existing outdoor features. This allows homeowners to consider the placement of the pool, patio areas, landscaping, and other amenities together when developing the overall backyard design.

In addition to pool construction, the company offers outdoor living services that can be incorporated into a larger backyard project. These include patios, outdoor kitchens, pergolas, fire features, water features, and custom decking. Combining these elements with a pool allows homeowners to plan the pool area and

surrounding spaces as part of one project.

The expansion does not rely on unsupported claims about increased property value or reduced household costs. The potential value of a pool can vary based on factors such as the property, local market conditions, installation costs, and buyer preferences. Likewise, energy use depends on the pool's equipment, operating schedule, size, and other project specifications. Customers can discuss equipment options and operating considerations when developing a design.

Sustainability-related features can also be considered on a project-by-project basis. The company currently lists energy-efficient pool equipment among its design and equipment options, including efficient pumps and filtration technology. Specific energy or cost savings should be evaluated according to the equipment selected and how the pool is operated rather than presented as a guaranteed result.

Trusted Pool & Spa currently describes itself as a family-owned and operated company and states that it is licensed and insured. The company provides free estimates and handles projects throughout Sarasota and Manatee Counties, with Lakewood Ranch included among its service areas.

For homeowners considering custom pools in Lakewood Ranch, FL, the expansion provides access to a range of design and construction options. Customers can request a consultation to discuss property conditions, pool dimensions, materials, features, equipment, permitting, and project timelines. The company can also provide current information about available services and estimates based on individual project requirements.

For more information about Trusted Pool & Spa's custom pool services, interested homeowners can visit the company's website or contact its office directly. Current service availability, project timelines, feature options, and estimates should be confirmed during the consultation process.
