

## **Home Smith Machine With Cable Weights Available Now for Home Exercise Enthusiasts by Strongway Gym Supplies**

*August 17, 2026*

Coventry, UK - August 17, 2026 -

Strongway Gym Supplies has announced the availability of its Smith machine with weights and cable resistance, adding another multifunctional strength-training system to its home fitness equipment range. The release brings guided barbell movement, cable exercises and integrated resistance together within one training station, giving home gym users several options for resistance training from a single setup.

The equipment has been designed with domestic workout areas in mind, where available floor space can influence the choice of fitness equipment. A Smith machine provides a guided movement path for selected barbell exercises, while the cable section allows movements to be performed from different positions. Bringing these functions together creates a training station capable of supporting both compound and isolation exercises.

Specifications of the Smith machine and the package, including details such as the number and weight

denominations of plates included, type of bench, etc, are available at: <https://strongway.co.uk/products/strongway-multi-gym-smith-machine-with-weights-packages>.

Smith machine systems are used in home training spaces where several exercise functions are required without installing numerous individual machines. The cable section can accommodate movements such as pulldowns, rows, curls and triceps exercises, while the Smith machine can be used for selected pressing and lower-body movements. The combination allows different exercises to be arranged within the same workout area.

The role of accessible home exercise has also been examined in research. A 2022 review titled 'Home-fitness and active ageing: A review?', published in the Scientific Journal of Sport and Performance and conducted at the University of Urbino 'Carlo Bo' in Urbino, Italy, found that regular home-based exercise can play a key role in maintaining physical and cognitive health in adults. Conducted by Capriotti A, Patregnani V, and Federici A, the study concluded that individuals who engage in consistent physical activity at home tend to experience a higher quality of life compared to less active individuals, highlighting the importance of accessible exercise strategies for healthy ageing.

The review is relevant to the growing use of equipment that allows structured exercise to take place at home. A Smith machine with cable resistance can form part of such an environment by providing access to several forms of strength exercise without requiring separate machines for each movement. The range of available exercises can also allow routines to be adjusted as training requirements change, although correct assembly, positioning and technique remain important when using resistance equipment.

Strongway Gym Supplies has also made available a Smith machine home gym with integrated weights, providing another option for users establishing a varied training station within a domestic setting.

Those curious to explore the Smith machine as a standalone product rather than as a part of a package can visit: <https://strongway.co.uk/products/strongway-multi-gym-with-weights-multifunction-home-gym-machine-1>.

Home gyms are frequently assembled over time, with equipment selected according to available space and the types of training planned. Multifunction machines can simplify this process by combining several exercise functions within one frame. Such arrangements can be particularly useful in garages, spare rooms and other areas where installing multiple standalone machines may not be practical.

The latest Smith machine availability adds another option for home users seeking equipment capable of supporting varied resistance routines. Guided bar movement can be used for selected exercises, while the cable section introduces additional movement patterns that can complement dumbbells, benches and other equipment already available in a home gym.

The release forms part of Strongway Gym Supplies' continuing catalogue updates across the home fitness sector. By combining several resistance-training functions within one machine, the latest system is positioned as a practical addition to residential workout spaces where equipment choice, exercise variety and efficient use of available room remain relevant considerations.

Lastly, the wider Strongway Gym Supplies home fitness range includes strength-training equipment, free weights, benches, racks, cardio machines and related accessories. The collection is available to be explored at: <https://strongway.co.uk/collections/home-fitness>.
