# Ryan & Gordy?s Glass Highlights Risks of Summer Heat to Windshields and Need for Timely Auto Glass Repair

*August 14, 2026*

HASTINGS, MN - August 14, 2026 -

Ryan & Gordy?s Glass draws attention to the effects of summer heat on vehicle windshields and the importance of addressing damage promptly through professional auto glass repair. High temperatures combined with direct sunlight and rapid cooling from air conditioning can expand existing rock chips or cracks, potentially leading to more extensive damage that compromises vehicle safety and visibility for drivers across Minnesota and Wisconsin.

The company, established in 1972, serves the region with expertise in assessing and repairing heat-related glass issues. Technicians evaluate chips and cracks to determine whether a repair with specialized resins can stabilize the glass or if full replacement is necessary to restore structural integrity. Services include rock chip repairs, windshield replacements, side and rear glass work, automotive mirrors, and installations for cars, trucks, recreational vehicles, and heavy equipment. Premium Sika adhesives are used in every installation to ensure secure, lasting bonds that withstand temperature fluctuations common during warmer months.

Mobile service enables certified technicians to perform auto glass repair at customer locations throughout the area, including homes, workplaces, or roadside sites. This capability reduces the need to transport damaged vehicles during peak summer travel periods and helps limit further exposure to heat and road debris. The company also assists with insurance claims by coordinating directly with providers, managing documentation, and supporting direct billing where applicable. Free estimates outline available options based on the specific extent of damage and vehicle type.

Technicians hold Auto Glass Association certifications and operate as members of the National Glass Association. These credentials guide proper installation techniques that maintain the critical structural role of windshields in overall vehicle safety. For vehicles equipped with advanced driver assistance systems, recalibration services follow glass work to restore the accurate function of cameras, sensors, and related safety features.

In addition to automotive services, Ryan & Gordy?s Glass provides residential and commercial glass solutions. Home offerings include custom shower doors and enclosures, window replacements, mirrors, patio table tops, fireplace glass, tempered glass, and custom cuts of Plexiglass and Lexan sheets. Commercial projects cover storefront replacements, office installations, and industrial applications designed to minimize operational interruptions for businesses.

Jay Ryan, Owner of Ryan & Gordy?s Glass, said, "Summer heat can turn a small chip into a larger crack relatively quickly under the right conditions. Professional assessment and timely auto glass repair help protect both the glass and the overall integrity of the vehicle."

Ryan & Gordy?s Glass continues its long-standing role as a family-owned provider of glass services with facilities in Hastings and Red Wing, Minnesota. The company emphasizes quality materials, trained technicians, and practical solutions for the challenges presented by seasonal temperature extremes. Free estimates remain available to help vehicle owners understand the condition of their glass and the available paths for repair or replacement.

Customer experiences frequently note the efficiency of work completed under varying conditions. Reviews describe positive outcomes with cracked windshields handled through insurance coordination and finished promptly via mobile service. Others highlight the convenience of loaner vehicles when shop service is selected and the attention given to cleaning the vehicle after glass work.

This focus on summer-related risks aligns with broader patterns of increased road travel and temperature swings common in the region. Ryan & Gordy?s Glass maintains its commitment to supporting safe driving through consistent, standards-based auto glass repair practices across automotive, residential, and commercial applications. The company has built its reputation over more than five decades by adapting to

evolving vehicle technologies while upholding core principles of safety and reliability.

By addressing heat-related damage early, drivers can avoid situations where small issues escalate into larger safety concerns during the busiest travel months. Ryan & Gordy?s Glass remains equipped to handle these needs with trained staff, appropriate materials, and processes designed for both routine and emergency situations.
