

HRT Mobile Welding Highlights Family Roots Behind Custom Metal Fabrication in the Tri-Valley

September 22, 2026

LIVERMORE, CA - September 22, 2026 -

A family-operated welding shop in Livermore is drawing attention to the role independent fabricators play in serving contractors and property owners across the East Bay. HRT Mobile Welding, founded by welder Kyle Shannon, operates as a full-service metal fabrication shop and mobile welding company that pairs in-house steel work with a fleet capable of traveling directly to job sites.

The company reflects a model that has become increasingly relevant as industrial and commercial projects demand both shop precision and on-site flexibility. Rather than relying solely on a fixed facility, Shannon built the business around two capabilities working in tandem: structural fabrication completed under controlled shop conditions and mobile welding services delivered wherever a project requires them.

Based at 3555-C First Street and licensed through the California State Licensing Board under number 1132921, HRT Mobile Welding metal fabrication Livermore work spans industrial, commercial, and residential settings. The shop has contributed to projects throughout Livermore, the greater Tri-Valley, and the East Bay,

with past work including the Port of Oakland. Specialty services include structural fabrication, specialty welding repair, heavy equipment welding, bucket repair and hard facing, pin and sleeve machining, line boring, and trailer repair.

The family-operated nature of the shop remains central to how the business approaches its work. As a working welder rather than an absentee owner, Shannon oversees fabrication personally, a structure common among smaller shops that has become a point of interest for contractors weighing where to source structural steel work.

"Running a family shop means the person quoting a job is often the same person welding it," said Kyle Shannon, owner of HRT Mobile Welding. "That continuity matters when a contractor needs structural steel fabricated to spec and installed correctly the first time."

The distinction between shop fabrication and mobile welding is one Shannon regularly explains to clients. Shop work allows for tighter tolerances, controlled conditions, and heavier equipment, while mobile welding addresses situations where components cannot practically be transported or where repairs must happen in place. Heavy equipment welding, bucket repair, and line boring frequently fall into the latter category, requiring a technician to reach the machine rather than the reverse.

"Some jobs belong in the shop and some belong on the job site, and knowing the difference saves customers time and money," Shannon said. "A cracked bucket or a piece of equipment that cannot move needs the welder to come to it, and that is where a mobile fleet earns its place."

Interest in local fabrication capacity has grown alongside construction and industrial activity across the region. Shops that combine fabrication and field service, such as HRT Mobile Welding, occupy a niche between large industrial suppliers and general repair providers.

HRT Mobile Welding is a metal fabrication and mobile welding company in Livermore, California, owned and operated by welder Kyle Shannon. The company provides structural fabrication, specialty welding repair, heavy equipment welding, pin and sleeve machining, line boring, and trailer repair for industrial, commercial, and residential clients throughout Livermore, the Tri-Valley, and the East Bay. Additional details about the shop are available at hrtmobilewelding.com.
