

Tree of Life Wellness Center Continues to Provide Car Accident Chiropractor Care in DuPage County, IL

August 17, 2026

ELMHURST, IL - August 17, 2026 -

Tree of Life Wellness Center continues to provide car accident chiropractor care in DuPage County, IL as part of its non-surgical reconstructive services for individuals recovering from motor vehicle collisions. The practice evaluates post-collision concerns through assessment and develops plans that may include gentle instrument-assisted adjustments, corrective exercises, and nutritional support.

Not all effects of a car accident appear immediately. Educational information indicates that stiffness, headaches, back discomfort, muscle tightness, reduced movement, tingling, or numbness can develop days or weeks after impact as the body responds to sudden force. Symptoms that may appear include whiplash from rapid neck motion, changes in spinal positioning, soft-tissue strain, and nerve-related sensations. These descriptions outline possible symptoms; they do not represent guarantees of outcome from any specific intervention. Individuals experiencing severe headache, significant numbness, weakness, or other neurological changes after an accident are advised to seek prompt evaluation by an appropriate medical professional.

Dr. Kelly Synowiec-Moroney, founder and lead chiropractor, directs clinical care at the center. She holds a Bachelor of Science from Northern Illinois University and a Doctor of Chiropractic degree from National College of Chiropractic. She is certified in pediatric chiropractic care, wellness practice, and functional medicine and has more than 26 years of experience. She conducts consultations, examinations, and adjustments directly.

"After a car accident, symptoms can emerge later as the body responds to the impact on the spine and surrounding tissues," said Dr. Kelly Synowiec-Moroney, Founder and Lead Chiropractor at Tree of Life Wellness Center. "A structured evaluation and multi-component plan help address the physical effects observed in many post-collision cases."

Care plans are individualized after review of the patient's history and examination findings. Instrument-assisted adjustments are used to support spinal positioning. Corrective exercises offer simple movements intended to promote strength and stability. Nutritional guidance is available as an adjunct. The combination is selected according to the specific presentation rather than applied uniformly. Outcomes vary by individual and injury characteristics.

"A plan that pairs adjustments with targeted exercises and nutritional considerations addresses the layered effects of a collision in a coordinated way," Dr. Kelly Synowiec-Moroney stated. "This approach is designed to support recovery of movement and comfort based on the findings of each evaluation."

Tree of Life Wellness Center has operated since 2005 with a focus on non-surgical reconstructive care. The practice emphasizes assessment of movement and muscle function through conservative methods. Clinical interactions remain one-on-one with the lead chiropractor. The center serves individuals recovering from collisions as well as families seeking wellness support for moms, children, and active adults.

Patients begin with a consultation that includes history review and examination. Findings are discussed, and a plan is outlined with attention to clear explanation of observations. Most insurance plans are accepted, with filing assistance available. Coordination with other healthcare providers occurs when additional evaluation is indicated. The center distinguishes general information about possible post-accident symptoms from the specific interventions it provides; the former educates patients about common timelines and symptoms, while the latter is determined by individual assessment.

The center's framework views physical, mental, and chemical factors as interrelated in overall function. Dr. Synowiec-Moroney's background includes early personal experiences with unresolved symptoms that directed her toward chiropractic and wellness methods focused on underlying contributors. As a mother, she incorporates practical awareness of daily physical demands into patient interactions.

Core values of honesty, compassion, and education guide practice operations. Patients receive information about residual effects from an accident and daily habits that may influence comfort and movement. The non-surgical model concentrates on spinal positioning, soft-tissue support, and stability measures.

Since its founding, Tree of Life Wellness Center has participated in local educational efforts and community wellness activities. Dr. Synowiec-Moroney serves as president and founding member of the Elmhurst Wellness Team. The practice maintains a consistent focus on conservative care options for conditions that include those arising after motor vehicle collisions.

Whiplash-related stiffness and headaches, mid- or lower-back discomfort, muscle tension, and nerve-related symptoms are evaluated within a structured clinical framework. Attention to spinal and soft-tissue findings forms part of the assessment process. Delayed symptoms receive the same careful evaluation used for immediate post-accident presentations. The multi-component structure?adjustments combined with exercises and nutritional considerations?supports patients in addressing observed effects of impact. Continuity of care is maintained through the lead chiropractor?s direct involvement from initial evaluation through follow-up.

Tree of Life Wellness Center continues to support individuals recovering from auto accidents by applying established chiropractic and wellness methods in a family-centered setting. The coordinated treatment approach provides an option for managing the physical effects of a collision based on documented assessment findings. Care remains grounded in evaluation, clear planning, and supportive measures.

Tree of Life Wellness Center offers non-surgical reconstructive care, chiropractic services, and wellness support to families and individuals in the Elmhurst area. Founded by Dr. Kelly Synowiec-Moroney, the practice specializes in family wellness with attention to the needs of moms, children, active adults, and those recovering from injuries including those related to motor vehicle accidents.
