

Smart Services PDX Highlights Growing Demand for Professional Landscape Architect Services

August 19, 2026

Damascus, OR - August 19, 2026 -

Smart Services PDX, a landscaping company serving the Portland Metro community for more than 20 years, reports a rising demand for professional landscape design as property owners increasingly seek outdoor spaces that balance function and sustainability. The company points to a shift in homeowner and commercial client priorities, with more people looking to transform ordinary yards into practical, environmentally responsible living areas.

The trend reflects broader changes in how property owners view their outdoor spaces. Rather than treating gardens and yards as purely decorative, many clients now request designs that serve daily use, conserve resources, and hold long-term value. This has increased interest in the work of the Smart Services PDX landscape architect team, which handles projects ranging from garden design and hardscape installation to landscape construction and ongoing maintenance.

Sustainability has become a central factor in these requests. The company incorporates native plants that

require less water, installs eco-friendly irrigation systems, and offers energy-efficient landscape lighting. These practices help clients reduce resource use while maintaining the appearance and usability of their outdoor areas throughout the year.

Alberto, speaking for Smart Services PDX, noted that client expectations have evolved considerably over the past several years. "Property owners today want outdoor areas that work as hard as the rest of their home," Alberto said. "They are asking about water conservation, native plantings, and spaces that can be used for gathering and relaxation, not just areas to look at from a window."

The company reports that requests for functional features have grown alongside interest in sustainable materials. Patios, walkways, retaining walls, decking, and outdoor kitchens are among the elements clients most frequently incorporate into design plans. Retaining walls in particular serve both practical and visual purposes, helping to prevent soil erosion and create usable flat areas on sloped properties.

Alberto added that careful planning during the design stage helps clients avoid costly changes later. "A thoughtful design considers how a space will function in every season and how it will mature over time," Alberto said. "Working through those details early gives property owners a clearer picture of what their finished landscape will become."

Smart Services PDX works with both residential and commercial clients across the region. The company approaches each project by first understanding client preferences and then tailoring a design that reflects individual style and practical needs. Its team manages each phase of a renovation, from plant selection to hardscape construction, with attention to detail throughout the process.

Smart Services PDX is a landscaping company based in Oregon that has served the Portland Metro area for over 20 years. The company offers a range of services for residential and commercial clients, including decking, fencing, firewood, landscape construction, landscape design, landscape maintenance, and sawmilling. Additional specialized services include landscape irrigation and retaining wall construction. The company emphasizes sustainable practices and describes its approach as treating clients like family while serving the surrounding community.
