

Select Power Expands Fleet to Speed Up Home Generators Installation

August 21, 2026

SARASOTA, FL - August 21, 2026 -
Select Power has added a new service vehicle and crew to its fleet, a move designed to expand installation capacity and reduce wait times for homeowners across the Sarasota region who are ready to have a backup generator installed. The expansion comes as demand for standby power continues to rise throughout coastal Florida, where seasonal storms frequently interrupt utility service.

The additional vehicle and trained crew allow Select Power Sarasota to schedule more installations each week and shorten the window between a client consultation and the completion of a working system. The company reports that faster scheduling has become a priority for area residents who want reliable backup power in place before peak storm season.

Select Power specializes in the installation, repair, and maintenance of generators from Kohler, Generac, and Briggs & Stratton. The company handles the full installation process, including sizing and selecting the appropriate unit, pulling required permits, managing the installation, and connecting each system to an

automatic transfer switch that restores power the moment an outage occurs. With the expanded fleet, that end-to-end process can now reach more households on a shorter timeline.

"Adding a second crew and vehicle was a direct response to the number of homeowners waiting to get a generator installed," said Kelvin Mills, speaking for Select Power Sarasota. "The goal is straightforward. When a family decides they want backup power, they should not have to wait weeks to get on the calendar. This expansion lets the team keep pace with local demand and keep installation timelines reasonable."

The company serves a broad service area that includes Bradenton, Longboat Key, Osprey, Siesta Key, Palmetto, Venice, North Port, Englewood, Punta Gorda, Arcadia, Tampa, and St. Petersburg. As a Generac PowerPro Premier dealer, Select Power employs factory-authorized technicians who complete rigorous training and maintain certifications for the brands they service. The expanded crew has undergone the same training standards applied across the existing team.

Beyond installation, the company provides generator repairs and maintenance plans that include scheduled check-ups and proactive inspections intended to keep units ready year-round. The added capacity is expected to support these ongoing service commitments as the installed base of generators in the region grows.

"Reliability matters most during the moments a home loses power," Mills added. "By growing the fleet, the team can install and support more systems without stretching response times for existing clients who depend on maintenance and repair service."

More information about Select Power and the expanded installation schedule is available through the company. Details about Select Power services and coverage areas can be found in the same location.

Those seeking information about Select Power can review the company's approach to backup power planning, which begins with a consultation to determine the right system based on a home's layout, power needs, and budget.

Select Power is a provider of backup home generator services based in Sarasota, Florida. The company focuses on the installation, repair, and maintenance of Kohler, Generac, and Briggs & Stratton generators. Its multilingual team serves residential and commercial clients throughout the greater Sarasota region.
