All Pro Newton Deck Builders Expands Deck Service Area to Wellesley

September 29, 2026

NEWTON, MA - September 29, 2026 -
All Pro Newton Deck Builders has extended its residential deck design and construction service into Wellesley, Massachusetts, giving property owners in the town direct access to a Newton-based contractor for new builds, replacements, and structural repairs. The expanded coverage takes effect immediately and reaches homeowners throughout Wellesley and its surrounding neighborhoods.

The move widens a service footprint that already covers Newton and several adjacent communities in the Greater Boston area. Wellesley, located in Norfolk County roughly six miles southwest of Newton, sits within a short drive of the company's existing base of operations, which allows crews to reach project sites without the scheduling delays that longer travel routes can introduce.

Demand for outdoor living space has grown across eastern Massachusetts in recent years, with many owners of older single-family homes choosing to add or rebuild decks as part of broader renovation work. Wellesley's housing stock includes a large share of homes built in the mid-twentieth century, many of which have decks that are now reaching the end of their functional lifespan and require replacement or code-compliant reinforcement.

"The addition of Wellesley reflects steady demand for outdoor living space among homeowners in the surrounding communities," said John Greene, owner of All Pro Newton Deck Builders. "Extending the service area lets the company schedule and complete projects in the town without routing crews from farther away."

Deck construction in Massachusetts is governed by the state building code, which sets requirements for footing depth, ledger board attachment, guardrail height, and load capacity. Projects in Wellesley generally require a building permit issued by the municipal inspectional services department, and inspections occur at defined stages of construction. The company handles permit applications and coordinates required inspections as part of each project, a process intended to reduce the administrative burden placed on homeowners.

The expanded service covers a range of construction types, including ground-level platforms, elevated decks, multi-level structures, and decks integrated with pergolas, railings, and built-in seating. Material options span pressure-treated lumber, cedar, and composite decking products, the last of which has seen rising adoption nationally because of lower long-term maintenance requirements compared with natural wood.

Industry data has tracked steady growth in composite and capped-polymer decking over the past decade, a shift attributed in part to fade resistance and reduced upkeep relative to traditional lumber. The material selected for a Wellesley project affects both installation cost and long-term maintenance, and the company reviews those trade-offs with homeowners before construction begins.

Greene noted that the decision to formalize coverage in Wellesley followed a period of recurring project requests from the town. "Homeowners in Wellesley had already been reaching out, and establishing a defined service area there was a practical response to that interest," he said. The company reports that estimate requests from the town informed the timing of the announcement.

Seasonal timing also shaped the rollout. Deck construction in New England concentrates in the spring and summer months, when weather permits concrete curing and exterior framing, and contractors commonly finalize schedules well in advance of peak season. By formalizing its Wellesley coverage ahead of the coming build season, the company positions itself to accept and sequence projects during the period when homeowner interest typically rises.

The expansion does not alter the company's existing operations in Newton or the other communities it serves. Instead, it adds Wellesley as a defined service area with the same design consultation, construction, and permit-handling process applied elsewhere. Project timelines vary according to size, material selection, and permitting, factors that are reviewed with each homeowner during an initial assessment.

For homeowners in Wellesley considering a new deck or the replacement of an aging structure, the expanded coverage provides a local point of contact for design and construction managed by a single contractor. Details on the service area and the types of projects handled are available through All Pro Newton Deck Builders.
