

Q Electric Announces Free Whole-Home Safety Inspection for San Antonio Electrician Services

August 26, 2026

SAN ANTONIO, TX - August 26, 2026 -

Q Electric, a licensed electrical services provider serving San Antonio and surrounding communities, has announced a free whole-home electrical safety inspection available to property owners throughout the coming month. The initiative offers residents an opportunity to have their electrical systems evaluated at no cost, providing added confidence in the safety and reliability of their homes.

The inspection program covers the primary components of a residential electrical system, from panels and outlets to smoke detectors and surge protection. Property owners across the region, including Elmendorf, Floresville, Poth, Sandy Oaks, and St Hedwig, are eligible to participate. The offering reflects a broader emphasis on preventive safety within the electrical trade, where routine evaluations can identify aging components and potential hazards before they lead to failures or fire risks.

"Electrical systems tend to age quietly, and many homeowners have no reason to think about their wiring until something goes wrong," said Quinton House of Q Electric. "A thorough inspection gives people a clear

picture of the condition of their electrical system, and it can surface small issues before they become larger problems. Offering this at no cost removes a barrier that often keeps people from taking that first step."

During each inspection, licensed technicians review the electrical panel, examine outlets for wear, confirm that smoke detectors are functioning, and assess whether a home carries adequate surge protection. The company notes that older properties in particular can benefit from an evaluation, as electrical demands in modern households have grown considerably with the addition of smart devices, electric vehicle chargers, and other equipment that draws heavily on existing systems.

Beyond the inspection program, Q Electric San Antonio provides a full range of residential and commercial electrical services. These include electrical outlet replacement, backup generator installation, smart home automation, whole-home surge protection, electric vehicle charger installation, ceiling fan replacement, electrical panel upgrades, and smoke detector replacement. The company also works with businesses on commercial electrical projects, offering solutions intended to be safe, reliable, and efficient.

"The response we see when people understand the current state of their electrical system is what drives this program," House added. "Safety is not something that should depend on whether a homeowner can budget for an inspection. Making the evaluation free is a straightforward way to help more families protect their homes."

Customer feedback regarding the company's work can be found on the Q Electric Yelp page, where the business maintains a presence alongside its ongoing service in the greater San Antonio area. The company has built its practice around clear communication and consistent workmanship, and it offers financing options to help property owners manage the cost of larger electrical projects.

Q Electric is a licensed electrician company based in San Antonio, Texas, serving both residential and commercial clients. The company provides a wide range of electrical services, including panel upgrades, generator installation, surge protection, electric vehicle charger installation, and smart home automation. Q Electric serves Elmendorf, Floresville, Poth, San Antonio, Sandy Oaks, and St Hedwig, and it remains focused on delivering professional and reliable electrical work throughout the region.
