Wenger Remodeling Introduces Aging-in-Place Remodeling Services for Local Homeowners

August 24, 2026

GARNET VALLEY, PA - August 24, 2026 -
Wenger Remodeling has announced a new initiative focused on aging in place remodeling, providing homeowners with options for making residential spaces more accessible, functional, and comfortable as their needs change. The initiative expands the company?s remodeling services to include home modifications designed to support older adults who want to remain in familiar surroundings. These projects can also help homeowners plan for changing mobility needs while maintaining the overall character and usability of their homes. By considering accessibility during the remodeling process, homeowners can address potential challenges while creating spaces that support everyday routines, movement, and independence.

Founded by Jonathan Wenger, Wenger Remodeling has developed its remodeling services around the changing needs of local homeowners. The new aging in place remodeling initiative addresses common accessibility considerations within kitchens, bathrooms, entrances, and other areas of the home.

Aging-in-place remodeling can involve modifications ranging from individual accessibility upgrades to larger renovation projects. Depending on the homeowner?s needs and the layout of the property, projects may include grab bars, ramps, walk-in tubs, non-slip flooring, improved lighting, wider pathways, and kitchen features designed to make everyday tasks easier.

Jonathan Wenger said the initiative reflects an increasing interest among homeowners in planning for long-term accessibility. Rather than waiting until mobility or accessibility concerns become urgent, homeowners can evaluate their properties in advance and consider changes that may make the home easier to navigate.

The company?s approach focuses on discussing each homeowner?s goals, existing home layout, and potential accessibility considerations before remodeling work begins. This allows proposed modifications to be considered within the context of the property and the individual?s preferences.

Aging-in-place remodeling does not necessarily require a complete home renovation. Smaller projects, such

as adding support features or improving bathroom accessibility, may address specific concerns, while larger projects can incorporate accessibility features throughout multiple areas of a home.

Wenger Remodeling can work with homeowners to identify areas where changes may improve everyday functionality. Bathroom renovations, for example, can incorporate features such as walk-in bathing options, accessible flooring, additional support points, and layouts designed to provide greater ease of movement.

Kitchen projects may include changes to countertop placement, storage accessibility, lighting, and other features based on the homeowner?s needs. Entrance and mobility improvements can also be considered when appropriate.

Along with its remodeling services, Wenger Remodeling has introduced an online resource center covering topics related to aging in place and accessible home design. The resource center discusses concepts such as universal design, material considerations, and common accessibility barriers homeowners may encounter.

The educational materials are intended to help homeowners and families understand some of the factors involved in planning an aging-in-place project. Homeowners can use these resources as a starting point when identifying areas of their property that may require attention.

Wenger Remodeling encourages homeowners to consider accessibility as part of their broader home improvement planning. Project recommendations can vary depending on the property, the homeowner?s goals, and the specific challenges presented by the existing space. The aging-in-place initiative coincides with Wenger Remodeling?s 15th anniversary. The milestone provides an opportunity for the company to expand its service offerings while continuing to address residential remodeling needs within the community.

Homeowners interested in aging-in-place modifications can contact Wenger Remodeling to discuss their remodeling goals and determine which types of improvements may be appropriate for their property.
