

Efficient Hygiene Services Expands Offerings With New HVAC Cleaning Service

August 25, 2026

August 25, 2026 -

Efficient Hygiene Services has announced the expansion of its hygiene and sanitation offerings to include specialised HVAC cleaning services for commercial and residential properties. The new service is intended to provide property owners and managers with an additional option for maintaining HVAC systems as part of their broader building maintenance routines.

HVAC systems can collect dust and other particles over time, particularly when filters, ductwork and other accessible components are not maintained according to the system manufacturer's recommendations. Regular inspection and cleaning may form part of a property's overall maintenance plan, depending on the type of HVAC system, its usage and the surrounding environment.

Efficient Hygiene Services' new HVAC cleaning services are designed to address cleaning and maintenance needs associated with HVAC equipment and related components. The company says the service can be considered by businesses and homeowners looking to include HVAC maintenance alongside other hygiene and property-care tasks.

The company has introduced the service as awareness of indoor environmental conditions continues to influence property maintenance decisions. HVAC systems play a role in circulating air throughout buildings, making their upkeep one consideration for property owners developing routine cleaning and maintenance schedules.

HVAC systems can contain accumulated dust, dirt and other debris when maintenance is delayed. The presence and type of material found within a system can vary depending on factors such as building use, location, system design and maintenance history. Professional inspection can help determine whether cleaning is appropriate for a particular system.

Efficient Hygiene Services' team uses cleaning equipment and methods selected for HVAC maintenance work. Services may include inspecting relevant areas of an HVAC system and cleaning accessible

components where appropriate. The specific work required can vary based on the system and the condition of its components.

The company has also published an informational blog covering HVAC maintenance and related considerations for property owners. Topics discussed in the resource include general indoor air quality considerations, HVAC maintenance, cleaning schedules and factors that may influence the condition of an HVAC system.

The resource is intended to give businesses and homeowners additional background information when considering HVAC maintenance. It also outlines why HVAC cleaning may form part of a wider property maintenance programme and encourages readers to consider their individual building and equipment requirements.

Efficient Hygiene Services' expanded service offering is relevant to commercial properties, residential buildings and other spaces where HVAC systems are used. Property managers and owners can consider factors such as system age, usage, environmental conditions and existing maintenance schedules when determining whether professional cleaning is necessary.

HVAC cleaning is one component of broader building maintenance and does not replace other measures such as appropriate filter replacement, equipment servicing or repairs. Where a system has a mechanical fault or requires specialist servicing, property owners may need to consult an appropriately qualified HVAC professional.

The new service gives Efficient Hygiene Services an opportunity to support customers with another aspect of property hygiene and maintenance. By providing information alongside its service offering, the company aims to help customers understand the factors that can influence HVAC system cleanliness and determine when professional cleaning may be suitable.

The full range of HVAC cleaning services is now available to new and existing clients. Those interested in learning more about the service, the types of HVAC systems that can be addressed and the cleaning process can contact Efficient Hygiene Services directly or visit the company's website for further information.
