

Fairmont Schools Brings New Approach to Preschool Education

August 25, 2026

August 25, 2026 -

Fairmont Schools is introducing a new preschool curriculum at its Anaheim Hills campus for the 2026-2027 academic year. The curriculum expands the school's early childhood education offerings and incorporates academic instruction, creative activities, social development, technology, and physical education into the preschool learning experience.

The new curriculum was developed with a focus on the varied learning needs of young children. It incorporates opportunities for students to explore their interests through a combination of structured activities, hands-on learning, and play. The program is designed to provide age-appropriate experiences that support students as they participate in different types of classroom activities throughout the school day.

The curriculum emphasizes several areas of development, including creativity, critical thinking, communication, and social-emotional skills. By incorporating individual and group activities, the program gives students opportunities to participate in different learning experiences while developing foundational academic and interpersonal skills.

Personalized learning is another component of the curriculum. Students can explore age-appropriate topics and activities based on their interests and developmental needs while participating in core classroom experiences. Teachers can use a combination of instructional methods and activities to support students as they develop foundational skills and become familiar with different subjects.

The new curriculum also incorporates Science, Technology, Engineering, and Mathematics (STEM) concepts. Students can be introduced to STEM principles through age-appropriate activities involving exploration, observation, problem-solving, and basic technology. These activities are designed to give young learners opportunities to engage with STEM concepts through hands-on classroom experiences.

Arts and physical education are also included in the curriculum. Creative activities give students opportunities to experiment with different forms of artistic expression, while physical education activities support

movement, coordination, and participation. Combining these areas with academic instruction gives students opportunities to engage with multiple subjects and activities during the preschool years.

Social interaction and collaboration are additional elements of the program. Group activities and projects can give students opportunities to practice communication, cooperation, and problem-solving with their peers. The curriculum also incorporates activities that encourage students to recognize different perspectives, participate respectfully in group settings, and develop age-appropriate social and emotional skills.

Parent involvement is another part of the educational experience. Fairmont Schools plans to provide opportunities for parents to learn more about classroom activities and early childhood education through workshops and informational sessions. These sessions can provide families with information about the curriculum and classroom experiences.

Technology is also incorporated into the new curriculum in an age-appropriate and supervised setting. Students can become familiar with digital tools through activities selected for their developmental level. The use of technology is intended to complement other classroom experiences, including hands-on activities, creative learning, physical education, and social interaction.

The curriculum provides an additional early childhood education program at the Anaheim Hills campus. Its components include academic concepts, STEM activities, arts, physical education, technology, and social-emotional learning. These areas are also relevant to the range of educational approaches offered by private preschools in Anaheim Hills, where early learning programs may incorporate multiple subjects and developmental activities.

The new program brings together multiple areas of early childhood education within the curriculum. Teachers can incorporate classroom instruction, hands-on projects, creative activities, group experiences, and age-appropriate technology as part of students' daily learning activities. The curriculum's structure provides a variety of activities that can be incorporated throughout the school year.

The curriculum will be introduced during the 2026-2027 academic year at the Fairmont Schools Anaheim Hills campus. The launch adds another curriculum option to the educational programs available through private preschools in Anaheim Hills and provides a structured framework for classroom instruction, enrichment activities, and student development.

Additional information about program schedules, classroom activities, and curriculum components is available through the school. Families seeking details about the new curriculum can visit the Fairmont

Schools website or contact the school's admissions office. The school can provide current information about the Anaheim Hills campus, program options, curriculum, and enrollment.
