

K L Contractor Plumbing Publishes Drain Cleaning Guide

October 02, 2026

MARIETTA, GA - October 02, 2026 -

K L Contractor Plumbing Inc has published new guidance, "Drain Cleaning Cost: Snaking vs. Hydro Jetting," comparing two common approaches to clearing drain and sewer line blockages. The resource explains how the type of obstruction, pipe condition, access, affected fixtures, and need for further diagnosis can shape a plumber's recommendation.

There is no single cleaning method for every clogged drain or sewer line because obstructions develop in different locations and from different materials. Drain snaking uses a flexible cable to break through, retrieve, or clear certain obstructions inside the line. Hydro jetting uses pressurized water to remove accumulated material from the inside walls of a pipe that is suitable for the procedure. The guide explains that diagnosis should come before selecting either method because cleaning the wrong area may leave the cause unresolved.

"Homeowners can make better decisions when they understand why a specific drain-cleaning method is

being recommended. A recurring clog or several affected fixtures can provide useful information about the system. Identifying the likely cause should come before deciding how the line should be cleaned. The proposed service should match both the obstruction and the condition of the pipe instead of relying on the same method for every backup," said Alex Laldin, marketing director for K L Contractor Plumbing Inc.

Snaking may be appropriate for certain localized obstructions involving hair, soap, organic material, or a removable foreign object. The cable works mechanically inside the line and may restore flow without cleaning accumulated material from the full pipe wall. The location, depth, and type of blockage help determine whether this approach fits the problem and the available drain access. A first-time clog limited to one accessible fixture may have a different scope from a blockage deeper in the drainage system.

Hydro jetting serves a different purpose and requires attention to the condition of the line. Pressurized water can remove grease, sludge, deposits, and recurring buildup from pipe walls when the plumbing is suitable for the procedure. Hydro jetting is a cleaning method, not a repair for broken, deteriorated, or failing pipe. A plumber may need to examine the line before using it when pipe condition remains uncertain, earlier cleaning brought only temporary relief, or the drainage problem keeps returning.

Recurring clogs and problems affecting several fixtures may point beyond a single drain. Warning signs can include water appearing in another fixture during use, toilets and drains backing up together, sewer odors, sewage backups, or unusual gurgling connected with drainage. A returning clog does not automatically mean an earlier cleaning was performed incorrectly or that the same method should be repeated. Continued buildup, an obstruction farther into the system, improper material entering the drain, or a damaged sewer line can each produce another backup.

The guide also explains when a sewer-camera inspection may provide useful information before more cleaning is performed. A camera can show conditions inside areas of a line that cannot be viewed from a sink, toilet, floor drain, or other fixture. It may help locate an obstruction, examine visible pipe condition, or determine whether cleaning alone is likely to address the problem. Property owners can learn more from the company's drain-cleaning guide before reviewing the purpose, limits, and scope of a proposed service.

K L Contractor Plumbing Inc provides drain cleaning and plumbing service for homes and businesses in Marietta and nearby Metro Atlanta communities. The company also handles sewer-line diagnosis, camera inspections, plumbing repairs, water heater service, fixture work, and emergency plumbing response. Its published resources explain common plumbing problems, the differences between related services, and the factors that can affect a service recommendation, helping readers understand why the same visible symptom can lead to different work.
