

VDB Adhesives Highlights Acrylic Sealants and Fillers for Construction Finishing Applications

August 31, 2026

BEVEREN, BELGIUM - August 31, 2026 -

VDB Adhesives, a Belgium-based building materials supplier, has drawn attention to its line of acrylic sealants and fillers developed to support reliable finishing across a wide range of construction projects. The focus reflects growing demand within the building sector for materials that deliver consistent sealing and bonding results during interior and exterior finishing work.

Acrylic sealants and fillers are widely used in construction to close gaps, seal joints, and prepare surfaces before painting and other finishing tasks. As building professionals face increasingly detailed specifications for durability and appearance, the availability of materials engineered for strength and long-term performance has become a central consideration for contractors and specifiers alike.

The VDB Adhesives professional acrylic sealants & fillers form part of a broader product portfolio that includes silicones, MS Polymer and hybrid sealants, PU-foams, spray adhesives, EPDM, glues, cleaners, primers, and tapes. The acrylic products are designed to address common finishing challenges, offering

options intended for interior joints, crack repair, and surface preparation ahead of decorative work.

"Acrylic sealants and fillers remain a fundamental part of quality finishing on any construction site," said a spokesperson for VDB Adhesives. "The aim is to provide materials that professionals can rely on for consistent application and lasting results, whether the work involves sealing joints, filling cracks, or preparing surfaces for finishing."

The company draws on more than 50 years of multi-generational industry experience in the adhesives and sealants field. That background informs the development and selection of products across its range, with an emphasis on quality assurance and technical expertise. VDB Adhesives works with clients to understand project requirements and provides tailored advice on product selection for specific applications.

Beyond standard product offerings, the company supports customization through design services, including private labeling and white label options. These arrangements allow distributors and industry partners to align products with their own brand requirements while drawing on the technical expertise VDB Adhesives brings to each collaboration.

"Every project carries its own demands, and the right material makes a measurable difference to the finished result," the spokesperson added. "Providing expert guidance alongside a comprehensive product range allows clients to match the correct solution to each task on the site."

The attention to acrylic finishing materials arrives as construction activity continues to place value on both efficiency and quality of finish. Materials that perform reliably during application help reduce rework and support the smooth completion of finishing stages, factors that carry weight for contractors managing project timelines.

VDB Adhesives specializes in advanced adhesive and sealant solutions for the building materials sector. Based in Belgium, the company offers a comprehensive line of products spanning acrylics, silicones, MS Polymer and hybrid sealants, PU-foams, spray adhesives, EPDM, glues, cleaners, primers, and tapes. Through decades of accumulated expertise and partnerships with leading producers, the company delivers adhesive and sealing solutions tailored to the requirements of its clients across construction and related industries.
