

HarPat Carpet and Flooring Expands Sustainable Flooring Options in Ardmore

August 26, 2026

August 26, 2026 -

HarPat Carpet and Flooring has announced an expansion of its flooring offerings in Ardmore, Pennsylvania, with the introduction of a new line of eco-friendly materials for residential properties. The development reflects growing interest in environmentally responsible building and renovation materials while broadening the range of flooring choices available to local property owners.

As a flooring company in Ardmore, PA, HarPat Carpet and Flooring offers hardwood, carpet, tile, and laminate flooring for customers with a variety of design and functional needs. The newly announced expansion adds bamboo, cork, and reclaimed wood products to that selection. According to the company, the materials are sourced from environmentally conscious manufacturers that follow established environmental standards.

The addition of sustainable flooring is part of HarPat Carpet and Flooring's effort to respond to changing preferences within the home improvement market. Consumers considering renovations increasingly evaluate materials based on factors beyond appearance. Durability, maintenance requirements, indoor environments, material sourcing, and environmental impact can all play a role in the decision-making process.

Eco-friendly flooring encompasses a variety of materials, each with different characteristics. Bamboo and cork are commonly considered renewable flooring resources, while reclaimed wood gives previously used material another application rather than relying exclusively on newly sourced lumber. These differences give homeowners additional factors to consider when comparing flooring for specific rooms and applications.

HarPat Carpet and Flooring also plans to provide customers with educational information about its new flooring choices. The company intends to discuss considerations such as durability, potential long-term savings, environmental impact, and characteristics that may affect indoor living spaces. Providing this information is intended to help property owners compare materials based on their individual priorities and understand how sustainable options differ from more conventional flooring products.

Gregory Harper, Owner of HarPat Carpet and Flooring, commented on the expansion and the company's focus on environmentally conscious materials.

"We are thrilled to roll out these sustainable flooring options at a time when more consumers and businesses recognize the importance of making environmentally friendly building choices," Harper said. "Our commitment to sustainability is reflected in not only our products but also in our everyday practices."

Alongside the product expansion, HarPat Carpet and Flooring is enhancing its online educational resources through a new blog series centered on sustainable living and flooring solutions. Planned topics include installation practices, maintenance recommendations for eco-friendly flooring, and comparisons among different sustainable materials. The content is designed to give homeowners additional information they can consider before selecting flooring for a renovation or improvement project.

Installation and ongoing maintenance are important considerations for any flooring material. Different products may have specific requirements related to cleaning, moisture exposure, preparation, installation methods, and routine care. By addressing these subjects through its educational materials, the company plans to provide practical context alongside information about the environmental characteristics of the new products.

The expansion also includes relationships with eco-conscious manufacturers as HarPat Carpet and Flooring works to maintain product quality while increasing the number of sustainable choices available to customers. These partnerships are intended to support the company's broader approach to incorporating environmentally responsible materials into its existing flooring selection.

The announcement follows regional industry recognition of HarPat Carpet and Flooring for its work in the flooring sector. As a family-owned business with decades of experience, the company has continued to adapt its services and products as consumer needs and flooring preferences have evolved. The introduction of sustainable materials represents another change to its offerings in response to developments within the home improvement industry.

HarPat Carpet and Flooring also plans to host workshops and seminars at its Ardmore location. These events are expected to focus on flooring materials and environmentally conscious practices, giving local residents opportunities to learn more about sustainable options and the factors that can influence flooring decisions.

For homeowners, choosing flooring often requires balancing appearance, functionality, maintenance, expected use, and budget. Environmental considerations have added another element to that process as consumers become more attentive to how building materials are produced and sourced. The expanded selection gives customers interested in sustainability additional materials to evaluate alongside traditional

flooring choices.

Through the new product line and planned educational initiatives, the flooring company in Ardmore, PA is expanding the information and material options available to customers interested in environmentally responsible home improvements. Residents can visit the HarPat Carpet and Flooring showroom to view the newly added sustainable flooring products and learn more about their characteristics, installation considerations, and maintenance requirements.
