

Go Industries Expands Commercial Grade Winch Grille Guard Systems for Ford F250 and Heavy-Duty Trucks

September 04, 2026

Richardson, TX - September 04, 2026 -
Go Industries Inc has expanded its lineup of front-end protection products with the introduction of its Commercial Grade Winch Grille Guard System, a modular design engineered to accommodate integrated winch carriers and optional brush guards across a range of heavy-duty trucks.

The new system builds on the company's established catalog of winch grille guards Ford truck owners have relied on for durable front-end protection. Constructed from 5/16 inch laser-cut steel uprights and 2.5-inch 16-gauge steel cross tubes, the guard is designed to deliver substantial protection while providing a base for adding a winch carrier and brush guards.

The modular approach allows drivers to configure the system according to their specific needs. Optional brush guards complement vehicle lines and add protection to the headlight area from road debris and off-road brush. The company offers optional winch carriers supporting 9.5 or 16.5 capacities, giving operators flexibility depending on their application.

Each system arrives with custom, heavy-duty mounting brackets designed with the installer in mind for maximum strength during fitment. The products can be tailored based on the vehicle's year, make, and model, and the range now covers configurations such as the Ford F250 grille guard with winch as well as larger platforms including the Ford F550.

"The expansion of this modular system reflects a continued focus on practical, durable protection for working trucks," said a spokesperson for Go Industries. "Fleet operators and individual owners have long asked for a single platform that can support a winch carrier and brush guards without compromising strength, and this system was engineered to meet those requirements."

All products in the line are backed by a three-year warranty covering materials, workmanship, and finish. The company noted that parts are manufactured in the United States, consistent with its long-standing production standards.

"Manufacturing in the USA remains central to how the company approaches quality control," the spokesperson added. "Every component is produced to specification so that the finished guard performs as intended in demanding conditions, whether on the job site or off-road."

The Commercial Grade Winch Grille Guard System joins a broader catalog of front-end and rear-end protection products, including Rancher Grille Guards, BigTex Grille Guards, medium-duty grille guards, Pro Series bumper replacements, and heavy-duty headache racks. The company also produces air flow tailgates, mud flaps, and steps for additional truck functionality.

Go Industries Inc has served the truck accessory, law enforcement, and custom manufacturing markets since 1978. Based in Richardson, Texas, the company designs and manufactures front and rear protection systems for trucks, specialized equipment for law enforcement vehicles from manufacturers including Chevrolet, Dodge, and Ford, and custom manufacturing solutions for customers with specialized requirements. The company holds Platinum Status with SEMA, an industry recognition of its service and product standards. Its resources include product instructions, a product catalog, warranty information, and instructional videos.
