

Ariel Services, Inc. Enhances Delivery of Plumbing and Compliance Services Across New York City

August 28, 2026

NEW YORK, NY - August 28, 2026 -

Ariel Services, Inc., a New York City-based plumbing and compliance company headquartered on Grand Street in Manhattan, announced that it has continued to expand the training, certifications, and administrative tools behind its core services, an effort the company said is intended to make its compliance work faster and more consistent for property owners across the five boroughs.

The company, founded in 1999 and led today by Licensed Master Plumber Ariel Mizrahi, provides gas service restoration and leak repair, Local Law 152 gas piping inspections, annual low-pressure boiler inspections, fire sprinkler inspections, backflow prevention testing, and Department of Buildings violation removal. Over recent months, the company said it has placed additional emphasis on expanding the qualifications held by its team of more than 20 trained plumbing mechanics, including NYC Department of Buildings gas work qualifications, backflow prevention testing certification, and FDNY S-12 and S-13 certifications related to fire protection systems.

Ariel Mizrahi said the goal of expanding staff certifications is to reduce the number of steps involved when a single property needs more than one type of compliance service.

"A lot of the buildings we work with need more than one thing done at once, whether that's a gas piping inspection alongside a boiler filing, or a backflow test alongside work on a violation," Ariel Mizrahi said. "Having more of our team certified across these different areas means we can move through that work without bringing in outside specialists for each piece, which tends to slow things down."

The company has also continued to refine the administrative side of its work, including the invoicing and payment process used for completed jobs. Technicians generate invoices directly from a phone application while on site and send a secure payment link by email, allowing property owners and managers to pay by credit card without waiting on a mailed invoice. The company said this approach has been in place for some

time but continues to be refined as part of its broader effort to modernize how it interacts with clients outside of the technical work itself.

"The permitting and paperwork side of this business can be just as complicated as the plumbing itself, so we have tried to make that part of the process as simple as possible," Ariel Mizrahi said. "Getting an invoice and a payment link the same day a job is finished sounds like a small thing, but for a property manager juggling several buildings, it adds up."

Alongside its investment in staff certifications and administrative tools, the company said it has continued to refine how it coordinates permitting and inspection scheduling with the New York City Department of Buildings, the Department of Environmental Protection, and the Fire Department of New York, depending on the service involved. Local Law 152 gas piping inspections require filing with the Department of Buildings on a four-year cycle, annual boiler inspections require yearly documentation, and backflow prevention testing requires GEN215B filings to the Department of Environmental Protection. Fire sprinkler inspections, including the required five-year hydrostatic pressure testing of standpipes, must be witnessed by the Fire Department of New York.

Ariel Mizrahi said the company's approach across all of these services has always emphasized planning ahead of a deadline rather than reacting once one has passed, and that recent internal changes are meant to reinforce that approach rather than shift it.

"Our philosophy has always been that this work goes better when it's scheduled and planned out, not rushed," Ariel Mizrahi said. "Expanding what our team is certified to do and making the administrative side smoother both support that same idea. It means we can plan a visit to a building and handle more of what that property needs in a single, well-organized appointment."

The company said its work continues to span a wide range of building types across Manhattan, Brooklyn, Queens, the Bronx, and Staten Island, from smaller multifamily properties to larger buildings managed by professional property management companies. Ariel Mizrahi said that range is part of why the company has prioritized cross-training its staff across multiple certification areas rather than maintaining narrow specialties.

"Every building is a little different, and the compliance needs of a five-story building are not always the same as a larger complex down the block," Ariel Mizrahi said. "Having a team that can move between different types of inspections and repairs means we can meet a building where it is, instead of asking a property owner to coordinate multiple contractors for what could be handled in one visit."

The company said it plans to continue expanding staff certifications and refining its internal processes as part of its ongoing approach to serving property owners across New York City.

Ariel Services, Inc. is a Licensed Master Plumber-led plumbing and compliance company based in Manhattan, serving properties across Manhattan, Brooklyn, Queens, the Bronx, and Staten Island. The company provides gas service restoration and leak repair, Local Law 152 gas piping inspections, annual boiler inspections, fire sprinkler inspections, backflow prevention testing, and Department of Buildings violation removal services.
