

822 Heat and Air Expands Commercial HVAC Installation and AC Repair Services as HVAC Company Grows Across North Texas

September 23, 2026

Benbrook, TX - September 23, 2026 -

822 Heat and Air has expanded its commercial HVAC installation and air conditioning repair services to meet rising demand from businesses and homeowners across North Texas. The expansion broadens the contractor's capacity to handle complete heating and cooling system installations for both large-scale commercial facilities and residential properties throughout its established service region.

The company specializes in full HVAC installation, ductwork, and ongoing maintenance for commercial and residential clients. With the expanded service offering, its team of licensed technicians can now take on a greater volume of large-scale commercial installation projects while continuing to serve residential customers who depend on reliable heating and cooling systems during the region's demanding seasonal temperature swings.

As one of the granbury hvac companies serving the surrounding communities, 822 Heat and Air provides

installation, repair, and maintenance across Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, and Dallas, as well as the wider Greater DFW Metroplex and its suburbs. The expansion reflects the company's response to sustained demand for professional heating and air conditioning work throughout the area.

David, a company representative at 822 Heat and Air, said the expanded commercial focus addresses a clear need among area businesses. "Commercial buildings have different heating and cooling requirements than homes, and getting an installation right the first time protects a business from downtime and higher operating costs down the road," David said. "Expanding the installation and repair side of the operation allows the technical team to serve larger projects while maintaining the same standards applied to every residential job."

The commercial HVAC service covers the heating, cooling, and ventilation needs of commercial buildings, including installation, repair, and maintenance. Technicians develop solutions suited to each space with the goal of improving indoor environments and supporting energy efficiency. On the residential side, the company handles new system installation, repairs to existing units, and improvements to indoor air quality.

Among the HVAC companies DFW businesses and residents rely on, 822 Heat and Air also provides ductwork installation, repair, and maintenance. Properly installed and maintained ductwork supports efficient air distribution in both commercial and residential buildings, contributing to indoor comfort and lower energy use. The company additionally offers an AC tune-up service designed to keep air conditioning systems operating at peak efficiency, help prevent breakdowns, and extend equipment lifespan ahead of the cooling season.

"Regular maintenance is often the difference between a system that lasts and one that fails early," David said. "A thorough inspection and tune-up before the heavy cooling months keeps equipment ready when temperatures climb."

The company employs professional, trained, and licensed technicians capable of handling issues ranging from simple repairs and refrigerant recharging to condenser and coil servicing and complete system installation. Financing options are available subject to credit approval and offer eligibility.

822 Heat and Air is a professional heating, ventilation, and air conditioning company based in Granbury, Texas, serving both commercial and residential clients. The company offers Commercial HVAC, Residential HVAC, Ductwork, and AC Tune-Up services with a focus on keeping client properties comfortable and energy-efficient throughout the year across the Greater DFW Metroplex and surrounding communities.
