

Sarkinen Industrial Pipelining Highlights Trenchless Mainline Repairs That Eliminate Trenches

September 02, 2026

VANCOUVER, WA - September 02, 2026 -

Sarkinen Industrial Pipelining, a pipe repair and rehabilitation company serving Washington and Oregon, has drawn renewed attention to its no-dig repair methods following a series of five-star customer reviews recognizing its trenchless technology and large-project experience. The company reports growing demand for pipe rehabilitation solutions that restore aging infrastructure without extensive excavation.

The firm specializes in trenchless mainline repairs, a category of pipe restoration that addresses broken, cracked, or failing pipes without digging traditional trenches across roads, parking areas, or landscaping. Techniques include steam-cured pipe lining, UV spot repairs, and T-Liners designed to fix lateral connections. These approaches allow crews to rehabilitate both mainline and lateral pipes while leaving surrounding surfaces largely undisturbed.

Recent customer feedback has reinforced the company's reputation for this work. In a five-star review posted to its Google Maps listing, customer Karlie Ramirez praised the company for using technology to line pipes

without the need for extensive digging, describing the method as convenient, cost-effective, and less messy. She also noted the company's track record on large projects. The review can be viewed on the company's Google Maps business listing.

"Trenchless methods have changed what property owners and agencies can expect from pipe repair," said a spokesperson for Sarkinen Industrial Pipelining. "Restoring a failing line without tearing up a street or a landscaped area saves time and reduces disruption, and that is why more municipalities and commercial properties are turning to these solutions."

Alongside its trenchless repairs, the company provides hydro jetting as part of its cleaning and maintenance services. Hydro Jetting uses high-powered water pressure to clear blockages, remove roots, and descale pipes, preparing lines for inspection or rehabilitation. The service is delivered through vacuum truck operations that also handle storm, sewer, and wastewater system maintenance.

The company's broader service range covers Cured In Place Pipelining, closed-circuit television inspections, vac truck services, and robotic pipeline cutting using Schwalm robotic systems. Its crews work with pipe sizes from three inches to thirty-six inches and serve municipalities, government and city agencies, ports, industrial and commercial properties, and homeowners associations.

"The five-star response from customers reflects a focus on doing the work correctly the first time," the spokesperson added. "Accurate inspections, proven lining methods, and thorough cleaning all contribute to results that hold up over the long term."

Sarkinen Industrial Pipelining holds certifications in advanced robotic pipeline systems, LightRay technologies for pipe inversion and shorty repairs, and the Cured In Place Pipelining rehabilitation method. The company complies with recognized industry standards for pipeline assessment and maintains safety certifications including OSHA, confined space safety, OSHA 10, and OSHA 30 Training.

Sarkinen Industrial Pipelining provides pipe repair, lining, jetting, and video inspection services throughout Washington and Oregon. The company offers free on-site estimates and maintains availability at all hours, including holidays and weekends, for the industries and property owners it serves.
