

Crown Plumbing & Water Damage Restoration Launches Annual Disaster Relief Program for San Antonio TX Families

September 01, 2026

SAN ANTONIO, TX - September 01, 2026 -

Crown Plumbing & Water Damage Restoration has announced the launch of an annual disaster relief support program designed to provide comprehensive plumbing and restoration assistance to a San Antonio-area family significantly affected by a fire or major disaster each year. The initiative reflects the company's expanded capabilities following the recent addition of water damage restoration services and the opening of two new locations in the region.

Under the program, the selected family will receive combined plumbing and restoration services at no cost, addressing both the source of a disaster and the structural damage that follows. The approach centers on handling the initial leak or failure along with the resulting cleanup and reconstruction under a single provider, reducing the number of vendors a displaced family must coordinate during a difficult time.

The announcement follows a period of growth for the company. Crown Plumbing & Water Damage Restoration recently added water damage restoration to its existing plumbing offerings, allowing it to respond to emergencies from the first sign of a leak through complete property recovery. The company also opened a

new location on George Road in San Antonio and an additional location in Selma, Texas, extending its reach across the metropolitan area.

"Disasters rarely announce themselves in advance, and families are often left facing both a plumbing failure and the damage it leaves behind," said Jeremy Newman of Crown Plumbing & Water Damage Restoration. "This program is a way to give back to the community that has supported the company, and it reflects a belief that recovery should not have to be handled piece by piece across many different contractors."

The company's combined service model covers a broad set of needs. On the restoration side, the team handles fire damage restoration, mold remediation and testing, asbestos removal and testing, sewage cleanup, water damage restoration, and home remodeling and reconstruction. Plumbing services include installation, repair, water heater work, drain and sewer services, and routine inspections and maintenance.

Newman noted that the timing of the expansion supports the new relief effort. "Adding water damage restoration and opening additional locations means the company can reach more households quickly when an emergency strikes," he said. "That capacity is what makes an annual commitment of this kind realistic and sustainable for the years ahead."

The disaster relief program is intended to become a recurring effort, with one family selected each year based on the severity of a fire or major disaster and the household's need for combined plumbing and restoration work. The company plans to share details about eligibility and selection through its community outreach in the coming weeks.

Crown Plumbing & Water Damage Restoration is a San Antonio, Texas-based company providing plumbing and damage restoration services to residential and commercial clients. The company offers 24/7 emergency plumbing and water damage restoration and maintains service categories spanning both plumbing and restoration work. With recently added restoration capabilities and new locations in San Antonio and Selma, the company serves households and businesses throughout the greater San Antonio area.
