ChatSlide 3.0 Launches with Citation-Preserving AI Slides for Researchers and Educators

September 01, 2026

San Francisco, CA - September 01, 2026 -

ChatSlide.ai today announced the launch of ChatSlide 3.0, a major platform update that sharpens the company's focus on academic and research workflows alongside its established education tools. The release introduces reference-based AI slide generation designed specifically for the demands of scholarly communication, alongside expanded classroom-ready features for educators and instructional designers.

ChatSlide is an AI slide maker for education and research that turns papers, theses, and lecture notes into citation-preserving, editable decks and narrated video lessons. The platform is already used by more than 25,000 researchers at 200-plus universities worldwide and by 18,000 educators, and has been used to generate over 42,000 academic presentations, earning an average user rating of 4.9 out of 5.

The academic and research workflow at the center of ChatSlide 3.0 allows researchers to upload a peer-reviewed paper, thesis, dissertation, manuscript, preprint, or academic PDF and receive a structured slide outline that preserves in-text citations while automatically building a formatted bibliography. The system

retrieves supporting literature from PubMed to assist with literature reviews and evidence synthesis, and it generates data visualizations and charts directly from underlying datasets using Chart.js and D3. ChatSlide 3.0 also applies academic citation formatting automatically and can process dissertations exceeding 200 pages, including OCR support for scanned appendices and figures. Every generated slide remains fully editable before export to PowerPoint, PDF, or Google Slides, giving researchers control over the final presentation while eliminating hours of manual formatting.

These capabilities support a wide range of scholarly use cases, including conference presentations and academic symposiums, thesis defenses and viva voce examinations, systematic literature reviews, grant proposal and funding decks, principal investigator lab meetings, journal club slides with PICO framework extraction, A0 and A1 conference posters with figure captions, and department seminars and colloquia. By streamlining citation management and reference-based generation, ChatSlide aims to support academic integrity, reproducibility, and research dissemination across disciplines, helping scholars move more efficiently from empirical findings to shareable knowledge transfer.

For educators, instructional designers, and faculty, ChatSlide 3.0 converts lecture notes, textbooks, curricula, and syllabi into structured decks complete with speaker notes in under two minutes; educators have created more than 13,500 teaching presentations on the platform to date. These slides can be converted into narrated video lectures with AI voiceover, supporting flipped classrooms, asynchronous learning, and hybrid instruction models. Content can also be translated into more than 30 languages, aiding multilingual classrooms as well as parent and PTA communications. The company offers .edu discounts and maintains FERPA-aware processing that keeps student data out of model training, addressing a growing concern among institutions adopting AI tools.

Education-focused use cases include lecture slides and courseware, student projects and capstones, course materials and learning objectives, faculty training and professional development workshops, student tutorials and worksheets differentiated by grade level, and distance, hybrid, and LMS-delivered learning. The platform supports instructional design and pedagogy goals ranging from formative assessment to student engagement, spanning K-12, higher education, and continuing education settings.

"Academic and educational content has fundamentally different requirements than a typical business presentation: citations must be preserved, data must be represented accurately, and content must serve real learning outcomes," said Quanlai Li, Founder of ChatSlide.ai. "ChatSlide 3.0 was built around those requirements from the ground up, whether someone is defending a dissertation or preparing tomorrow's lecture."

Dedicated landing pages for each audience are now available, detailing workflows and use cases for researchers at chatslide.ai/research and for educators at chatslide.ai/education.

ChatSlide 3.0 is available now, with continued rollout of academic and education-specific features planned in the coming months. More information is available at <https://www.chatslide.ai>.

About ChatSlide.ai:

ChatSlide is an AI slide maker for education and research. It turns papers, theses, and lecture notes into citation-preserving, editable decks and narrated video lessons. Used by 25,000+ researchers at 200+ universities and 18,000+ educators.
