

Bow Tie Solutions Expands Custom Gate Installation Service With In-House Fabrication and Electrical Wiring

September 25, 2026

PEA RIDGE, AR - September 25, 2026 -

Bow Tie Solutions, a family-owned electrical contracting company based in Pea Ridge, Arkansas, has formally expanded its turn-key custom gate installation and repair service for residential and commercial properties across Benton County, Madison County, and Washington County. The expanded service covers the full process in-house, from design and fabrication through installation and electrical wiring, allowing customers to work with a single team rather than coordinating between separate gate and electrical contractors.

The Bowtie Solutions Custom Gate Installation service accommodates all gate types and materials, including swing, slide, rolling, chain link, ornamental iron, wood, vinyl, and steel gates. Because the company handles its own electrical work, the service extends to gate motor installation, low-voltage control wiring, control panel wiring, solar gate openers, smart gate systems, keypad entry, remote openers, safety sensors, and loop detectors.

Bow Tie Solutions is licensed and insured and has completed more than 500 jobs. The company reports that combining fabrication and electrical work under one roof reduces scheduling gaps and handoffs that commonly occur when property owners hire multiple trades for a single gate project.

"Property owners often assume a gate project requires two separate contractors, one for the structure and another for the wiring," said Bill Towler, spokesperson for Bow Tie Solutions. "Handling design, fabrication, installation, and electrical work with one team means the entire project stays coordinated from start to finish, and the responsibility for the finished result rests in one place."

In addition to new installations, the company offers same-day diagnosis and repair for existing gate issues, including gate electrical failures such as faulty motors, wiring problems, and malfunctioning control panels. This repair capability applies to gates originally installed by other contractors, giving property owners in the region an option for addressing sudden access and security disruptions.

The company noted that gate systems increasingly rely on electrical and electronic components, from solar-powered openers to smart access controls, which places electrical expertise at the center of both installation and maintenance. Because its licensed electricians perform the wiring directly, Bow Tie Solutions is positioned to service the electrical elements of a gate alongside its mechanical structure.

"Gates have become far more than a physical barrier," Towler said. "Motors, sensors, keypads, and smart controls all depend on properly executed electrical work, and that is where the company's background makes a practical difference for the people it serves."

Bow Tie Solutions is a locally-owned electrical contracting company with more than 40 years of experience serving Benton County, Madison County, and Washington County in Arkansas. Beyond gate services, the company provides electrical installation for renewable energy, industrial, commercial, and residential settings, along with generator maintenance and installation, metal fabrication, portable welding, and general welding services. The company offers free project estimates and emergency electrical services. Bowtie Solutions maintains a team of licensed electricians and skilled fabricators who complete each project to established safety and quality standards. The company emphasizes reliability and completing work correctly the first time for the residential and commercial clients it serves throughout Northwest Arkansas.
