

Davis and Son Plumbing Expands Residential and Commercial Services With Advanced Diagnostic Equipment

October 02, 2026

MONETT, MO - October 02, 2026 -

Davis and Son, an HVAC, plumbing, and electrical contracting company with more than 40 years of experience serving Southwest Missouri, has formally expanded its plumbing services to cover a full spectrum of residential and commercial solutions. The expansion follows recent investments in diagnostic equipment, including advanced leak detection technology and video inspection tools for sewer lines, which have strengthened the company's ability to identify and resolve complex plumbing issues with minimal disruption to the property.

Based in Monett, the company now offers an extended range of plumbing capabilities that include leak detection, drain cleaning, water heater installation and repair, sewer line maintenance and video inspection, backflow prevention, and septic tank services. These services are available to both homeowners and business operators across the region.

The recent equipment investments allow technicians to pinpoint problems that were previously difficult to locate. Video inspection tools provide a direct view of the interior of sewer lines, helping to identify blockages, root intrusion, and structural damage without extensive excavation. Advanced leak detection technology enables crews to find hidden leaks behind walls and beneath foundations, reducing the need for exploratory work.

"The addition of advanced leak detection and video inspection tools has changed the way the plumbing team approaches difficult jobs," said a spokesperson for Davis and Son. "Technicians can now locate the source of a problem quickly and address it with far less disruption to the home or business, which is something clients across Southwest Missouri have come to expect."

As part of the expanded offering, Davis and Son Plumbing recommends an annual plumbing inspection for both residential and commercial properties. An annual inspection is intended to catch potential issues before they develop into costly repairs, allowing property owners to plan maintenance on their own schedule rather than responding to unexpected failures.

The company also provides emergency plumbing services for residential and commercial customers, addressing urgent situations such as burst pipes, major leaks, and sewer backups. For commercial and industrial clients, Davis and Son offers customized maintenance programs designed to prevent downtime and extend the lifespan of plumbing equipment. These programs are tailored to the specific needs of each facility.

"The goal of the expanded plumbing services is to give clients lasting solutions rather than temporary fixes," the spokesperson said. "Whether the work involves a minor leak, a major emergency, or an ongoing maintenance program for a commercial facility, the focus remains on quality work and long-term reliability."

Davis and Son serves a wide area of Southwest Missouri, including Barry County, Lawrence County, Christian County, Greene County, Jasper County, Newton County, McDonald County, and Stone County, along with the cities of Springfield, Cassville, and Monett.

Davis & Son is a trusted HVAC, plumbing, and electrical contractor based in Southwest Missouri with more than 40 years of service to homes and businesses in the region. The company provides air conditioning, heating, and plumbing solutions and is known for fast response times, use of current technology, and a commitment to lasting results. Davis & Son continues to invest in new technologies and ongoing training as it adapts to the evolving needs of the communities it serves.
