No More Slamming Toilet Seats With Slow Close Seat And Lid For Marine Toilets

June 06, 2016

June 06, 2016 -

All white household size and marine toilets from Raritan Engineering, a business based in Millville, NJ, now come with a Slow Close Seat and Lid feature. This is to prevent slamming of toilet seats, which is usually startling particularly on board a boat. At night, the slamming noise can disturb the sleep of the crew. When released, Raritan's Slow Close Seat and Lid gently lowers to the bowl and the final contact is whisper-quiet. It is the finishing touch to the well-appointed marine head.

Kim Shinn from Raritan Engineering says: "We have designed a truly silent toilet seat and are proud to say that slamming toilet seats are now a thing of the past. Our Slow Close Seat and Lid technology means that seats can no longer slam, either after someone uses the toilet or when the seas are heavy and the boat sways. We're happy to see how popular the seat is already becoming."

Designed specifically for marine use, a special stopper locks the comfortable, ergonomic seat in place when someone is sitting on it. This counters the sideways motion often encountered on a boat and protects the hinges from undue strain. The Slow Close Seat and Lid is manufactured from durable HDF (high density fiberboard), quality finished in gleaming white and built with stainless steel fasteners to prevent corrosion.

While the new white Raritan marine and household size toilets now come standard with a Slow Close Seat and Lid, the seats are also available separately to upgrade an older unit. The household size seat & cover will fit the company's manual and electric toilets with standard style bowls, and even other brands with similarly sized seats. A bone version is planned.

For 58 years, Raritan Engineering has manufactured a wide range of innovative boating equipment. A pioneer in marine sanitation, it has been awarded numerous patents on its ground-breaking products. The marine size seat & cover is just the latest in their long list of products. Boats and ships around the world are now equipped with Raritan products, and many people within the marine world always look out for the latest developments from the company.
