

How a Dentist in Ukiah, CA Prioritizes Personalized Patient Care

September 04, 2026

UKIAH, CA - September 04, 2026 -

Khoury Dentistry today announced the integration of advanced 3D intraoral digital impression scanning technology at its general dental practice in Ukiah, California. The physical equipment upgrade replaces conventional elastomeric impression materials with high-precision optical scanning for diagnostic, restorative, and orthodontic workflows. The digital system enables the direct transmission of three-dimensional digital files to certified dental laboratories via secure electronic networks, reducing fabrication turnaround times for crowns, bridges, and custom nightguards. For community members evaluating options when selecting a dentist in Ukiah, CA, the installation of digital imaging technology offers an objective, technology-driven approach to comprehensive oral healthcare and preventative maintenance.

Digital intraoral scanners operate by projecting light sources onto dental structures and capturing thousands of optical frames per second to construct an interactive three-dimensional model of the dentition and surrounding oral tissues. Peer-reviewed dental literature indicates that digital impressions can shorten chair time and eliminate mucosal contact associated with traditional tray-based impression putties. While individual patient comfort and clinical outcomes vary based on anatomical factors and specific treatment requirements, high-resolution digital scans allow clinicians to evaluate tooth structure, enamel wear, and gingival margins

with high visual clarity. Furthermore, historical digital scans can be archived in electronic health records, allowing clinicians to track subtle physical changes in tooth orientation and enamel erosion over extended time periods.

The practice incorporates these digital impression capabilities across its full spectrum of general, restorative, and aesthetic clinical services. Available procedures include porcelain crowns, multi-unit fixed bridges, root canal therapy, complete and removable partial dentures, and clear aligner systems. When clinically indicated, restorative interventions assist in restoring masticatory function and preventing adjacent teeth from migrating into vacant spaces within the dental arch. However, candidate suitability for restorative or aligner therapies depends on comprehensive clinical examinations, periodontal evaluation, and radiographical assessment of underlying bone density during individual consultations. Clear aligner therapy efficacy, for instance, requires patient compliance with daily wear schedules and periodic progress evaluations.

In addition to restorative care, Khoury Dentistry maintains structured preventative protocols, including professional dental prophylaxis, low-radiation digital radiography, periodontal maintenance, and personalized oral hygiene instruction. Clinical consensus supports routine diagnostic monitoring and professional cleaning to help identify early-stage periodontal inflammation and dental decay before extensive treatment becomes necessary. The clinic also provides custom occlusal splints for bruxism and both in-office and take-home tooth whitening services, which are evaluated on a case-by-case basis to account for tooth sensitivity, baseline enamel shade, and existing dental restorations. These options allow patients to choose between immediate in-office care and gradual home application based on personal preference.

To complement the clinical technology upgrades, Khoury Dentistry has updated its administrative system with secure digital intake platforms. The operational enhancement allows patients to complete medical history documentation and registration forms prior to scheduled appointments, reducing waiting room times and streamlining communication between administrative staff and clinical team members.

Khoury Dentistry is a general dental facility located in Ukiah, California, serving patients throughout Mendocino County. Founded by Dr. Nicholas Khoury, a native of the region, the clinic offers preventative, restorative, endodontic, and aesthetic dental care utilizing modern diagnostic equipment and established clinical protocols. Service offerings include routine examinations, professional cleanings, digital radiography, crowns, bridges, dentures, root canal therapy, occlusal guards, and clear aligner treatments. For additional information regarding clinical services, facility equipment, office hours, or appointment scheduling, contact the practice directly or visit www.khourydentistry.com
