

North Valley Solar Power Opens New Solar Design and Management Office

September 04, 2026

LODI, CA - September 04, 2026 -

North Valley Solar Power, a locally owned solar design and project management company, today announced the expansion of its solar panel design and project management services across the greater Lodi region. The company now serves homeowners and businesses throughout the 95240, 95241, and 95242 zip codes from its Lodi office at 400 E Kettleman Ln, Suite 20L, supporting neighborhoods including Old Town Lodi, Woodbridge, Lincoln Village, and Lodi Lake.

The Lodi office coordinates every stage of a residential or commercial solar project, from initial energy consultation and custom system design through permitting, activation, and long-term monitoring. North Valley Solar Power designs each system around the specific roof orientation, shade pattern, and energy consumption of the property, using satellite imagery and shade modeling to produce right-sized proposals that match actual usage rather than overselling capacity. Every project is managed by a single local point of contact from consultation through activation.

"Going solar in Lodi comes with a different set of considerations than other parts of Northern California, from San Joaquin County permitting timelines to the specific utility rules that apply here," said Denae Davis, Office Manager at North Valley Solar Power's Lodi location. "Our team lives in this area, and that local knowledge translates directly into faster approvals and fewer surprises for the homeowners and businesses we serve."

Service scope from the Lodi office includes solar energy consultation, custom system design, financing coordination through partners including GoodLeap, Sunrun, EnFin, and Travis Credit Union, permit management, project oversight through activation, warranty support, and ongoing performance monitoring. The company handles every step of the customer experience with proactive communication, which the company positions as its core differentiator against out-of-state contractors and national franchise operators.

North Valley Solar Power operates as a member of the Better Business Bureau and holds active Chamber of Commerce membership. The company aggregates verified customer reviews across its Northern California Google Business Profile locations through Trustindex, giving prospective customers a single source of social proof across the service area. Customers work with the same local team from initial consultation through post-activation support, rather than being routed to distant call centers.

Beyond Lodi, North Valley Solar Power maintains offices in Stockton, Concord, and Sacramento, supporting solar projects across the broader Northern California region. The Lodi office is open Monday through Saturday from 7:00 AM to 10:00 PM and can be reached at 209-860-9220 or lodi@northvalleysolarpower.com.

Homeowners and businesses interested in a free consultation or a custom solar panel design and project management proposal for their property can contact the Lodi office directly. Additional information about North Valley Solar Power Lodi services, financing options, and current service areas is available at the company's Lodi location page.

As interest in solar energy continues across the Lodi area, property owners are increasingly considering how system design, energy usage, roof conditions, financing, permitting, and long-term performance can influence a solar project. A carefully planned solar system can account for both current electricity consumption and future energy needs while helping property owners better understand the equipment and project requirements involved. Local project coordination also helps keep homeowners and businesses informed as their solar project progresses through design, permitting, scheduling, activation, and ongoing system monitoring.
