

North Valley Solar Power Expands Residential Solar Service Coverage

September 04, 2026

CHICO, CA - September 04, 2026 -

North Valley Solar Power, a solar design and project management company, has announced expanded service coverage across Chico, Oroville, Paradise, and more than twenty surrounding neighborhoods from its office at 418 Broadway St in downtown Chico. The expansion gives homeowners throughout Butte County access to same-day consultations, custom system design, and full project management from a single local point of contact.

The Chico office now coordinates solar projects for residents in Downtown Chico, Bidwell Park, California Park, Chapmantown, the Esplanade corridor, Magalia, Paradise Pines, Thermalito, and communities throughout Oroville. The office serves zip codes 95926, 95928, 95973, 95965, 95966, and neighboring areas, with business hours running Monday through Saturday from 7 a.m. to 11 p.m.

As a locally owned solar company in Chico, North Valley Solar Power designs right-sized systems based on each household's actual energy usage rather than oversized configurations. The team handles every stage of

the customer experience, from the initial energy assessment and system design through permitting, financing coordination, utility approval, and system activation. Local familiarity with Butte County permitting offices and utility requirements helps the company move projects through approvals with fewer delays.

"Families in Chico, Oroville, and Paradise want a solar power company they can actually reach, with people who live in the same community they do," said Denae Davis, Office Manager at North Valley Solar Power. "Our team designs systems around each home's real energy needs and manages the entire project locally, so customers always know what is happening and what comes next."

The company coordinates flexible financing through established lending partners, including options with no upfront cost, and helps homeowners review current financing options and applicable state incentives. After each system is activated, the Chico team continues to monitor performance and provide long-term local support backed by robust warranties.

The expanded coverage responds to growing demand for residential solar across Butte County, where rising utility rates have pushed more homeowners to evaluate their energy options. As a solar company in Chico with a physical downtown office, North Valley Solar Power offers in-person consultations that many national providers operating through remote call centers cannot match.

Homeowners can schedule a free, no-obligation consultation by calling 530-804-5501 or visiting the North Valley Solar Power Chico location page.

For homeowners across Chico and the surrounding Butte County communities, evaluating solar can involve several important factors beyond system size alone. Household energy consumption, roof orientation, shade exposure, available roof space, seasonal electricity use, and future energy needs can all influence the design of a solar energy system. North Valley Solar Power uses these property-specific details to help homeowners understand how a proposed system may perform and how projected energy production relates to their existing utility usage.

The Chico team also helps customers understand the steps involved in moving a solar project forward, including design review, permitting requirements, financing coordination, project scheduling, inspection procedures, utility approval, activation, and long-term monitoring. Providing clear information throughout each stage gives homeowners a better understanding of project timelines and responsibilities while maintaining a consistent local point of contact. This approach is intended to make the solar evaluation and project management process easier to follow for residents throughout Chico, Oroville, Paradise, Magalia, Thermalito, and nearby communities.

About North Valley Solar Power
