

North Valley Solar Power Grows Service Coverage for Home Solar Projects

September 04, 2026

PLEASANTON, CA - September 04, 2026 -

North Valley Solar Power has announced expanded availability of its residential solar design and project management services from its Pleasanton office, extending support to homeowners across the Tri-Valley region, including Dublin, Livermore, San Ramon, Castro Valley, and Sunol.

The announcement reflects growing demand among East Bay homeowners for locally managed solar projects following changes to Pacific Gas and Electric's net billing rules. Under the current NEM 3.0 framework, oversized systems no longer deliver the returns they once did, making accurate system design more important than in previous years. North Valley Solar Power addresses this shift by sizing each system to a household's actual energy usage rather than selling excess capacity.

The company's Pleasanton office, located at 4695 Chabot Dr Suite 200-C, serves as the local point of contact for consultations, system design, financing coordination, permitting, project management, and long-term monitoring. The team's NABCEP-certified solar designers evaluate each property's energy usage history, roof

orientation, and shade patterns before producing a proposal. This design-first approach distinguishes the firm from national solar panel providers that apply standardized system templates across different markets.

Local knowledge plays a central role in project timelines. The Pleasanton team works directly with the City of Pleasanton Building and Safety Division on permitting and coordinates interconnection applications with Pacific Gas and Electric, which typically results in faster approvals than homeowners experience with out-of-area firms. The company manages the design, permitting, installation, and activation of each system, giving customers a single local contact from the first consultation through Permission to Operate.

"Homeowners in the Tri-Valley tell us the same thing again and again: they want straight answers, a system sized for their actual usage, and one local team that stays accountable from start to finish," said Denae Davis, Office Manager at North Valley Solar Power. "Our designers live and work in this community. When a customer in Ruby Hill or Vintage Hills calls with a question, they reach a person down the road, not a call center in another state."

As a solar company in Pleasanton with a physical office and locally based staff, the firm positions itself differently from door-to-door sales operations and remote solar panel providers that have drawn criticism across California for aggressive sales tactics and oversized proposals. The company offers free consultations to homeowners in Pleasanton and surrounding communities, whether or not those homeowners ultimately choose to move forward.

The expanded Tri-Valley coverage also includes ongoing support after systems are activated. The company monitors system performance, provides reporting to customers, and handles service questions through the same Pleasanton office, with business hours Monday through Saturday from 7:00 a.m. to 10:00 p.m. The office additionally coordinates financing options through established lending partners and helps customers review current financing options and applicable state incentives.

Homeowners interested in a consultation can contact the Pleasanton office directly or visit the North Valley Solar Power website for more information.

About North Valley Solar Power

North Valley Solar Power is a leading Pleasanton, California solar design and project management company serving homeowners throughout the Tri-Valley and Northern California. Locally owned and operated, the company designs right-sized residential solar systems and manages every stage of the customer experience, from consultation and system design through permitting, financing coordination, activation, and ongoing

monitoring. With offices across Northern California, the company combines local permitting knowledge with transparent pricing and proactive communication.
