

ABT Foundation Solutions Highlights Exclusive Water Control and Foundation Repair Systems

September 04, 2026

NEENAH, WI - September 04, 2026 -

ABT Foundation Solutions, a provider of foundation and basement services in Northeast Wisconsin since 2002, is highlighting its role as an exclusive provider of Dry Right® water control systems, Dry Right® sump systems, and the Right Wall foundation repair system. The designation reflects the company's long-standing use of specialized products designed for permanent repairs on residential and commercial properties. The firm completes approximately 800 to 1,200 jobs annually and continues to apply these systems as part of a full-service approach to foundation and basement work.

Dry Right water control systems and sump pump systems are used to manage water entry through foundation walls, floors, and related pathways. Installations may include interior drainage components and sump equipment selected to collect and redirect water away from occupied spaces. The Right Wall foundation repair system is applied where walls show signs of movement, cracking, or structural compromise. ABT Foundation Solutions diagnoses the cause of foundation issues before developing a customized plan intended to produce lasting results.

Work typically begins with a free inspection as standard practice. Technicians visit the property, assess

conditions, discuss options, and provide a written quote. Projects generally start within three weeks after an inspection is completed. All staff and installers undergo weekly training and are certified in foundation repair and basement waterproofing. The company does not hire subcontractors, a policy intended to maintain quality control from assessment through completion.

Dan Dillenberg, Co-Owner of ABT Foundation Solutions, described how product selection fits the firm's process. "Using designated water control and wall repair systems allows crews to apply consistent methods after the cause of a problem has been identified," Dillenberg said. The company was founded in 2002. Dillenberg joined as a project manager in 2014 and, with Mickey Stachurski, assumed ownership at the start of 2024. Stachurski entered the basement industry in 2008 and later served as a foreman and project manager.

The exclusive systems are used alongside other services offered by the company, including crawl space repair and encapsulation, concrete leveling through polyjacking, egress window installation, and gutter and gutter guard work. Additional products carried for customized installations include basement flooring, wall systems, dehumidifiers, and sump pumps. This inventory is intended to reduce the need for property owners to source materials from separate vendors.

ABT Foundation Solutions reports an A-plus rating with the Better Business Bureau. The firm states that it provides a written guarantee covering the scope of work and that warranties on completed repairs are transferable. Crews, estimators, and office staff handle a range of basement, foundation, concrete, crawl space, and gutter issues. Production leadership includes long-tenured field staff who have advanced through helper, foreman, and management roles.

Dillenberg added that ownership changes in 2024 were intended to preserve established practices. "The focus remains on diagnosing problems accurately and applying systems that match the conditions found at each property," he said. Community involvement by company leadership includes local youth programs, while office and field personnel participate in regional events. The company recently supported the Greenville Lions Catfish Concert as a returning gold-level sponsor.

Seasonal conditions in Northeast Wisconsin, including freeze-thaw cycles and variable precipitation, continue to influence foundation and basement performance. The company positions its water control and wall repair systems as part of a broader effort to address moisture, settlement, and structural movement with documented, written scopes of work. Free inspections remain available to property owners seeking an evaluation of existing conditions.

Founded in 2002, ABT Foundation Solutions, Inc. specializes in foundation repair, basement waterproofing, crawl space repair, concrete leveling, egress window installation, and gutter services for residential and

commercial properties in Northeast Wisconsin. The company employs a team of trained professionals who deliver customized, permanent solutions with a focus on quality and durability.
