

## North Valley Solar Power Expands Residential Solar Design Services

*September 08, 2026*

ANTIOCH, CA - September 08, 2026 -

North Valley Solar Power has expanded residential solar design and project management service availability across eastern Contra Costa County, adding same-day and next-day consultation appointments through its Antioch office at 5179 Lone Tree Wy #561. The expanded schedule reaches homeowners in Antioch, Brentwood and Pittsburg who are evaluating solar panel providers for their properties.

The expanded coverage now includes the 94509 and 94531 zip codes and neighborhoods including Deer Valley, Lone Tree Valley, Contra Loma, Dallas Ranch, Country Hills, Longview, Mira Vista and Black Diamond Hills. Consultation appointments are available Monday through Saturday from 7 a.m. to 10 p.m., a schedule the company adopted to accommodate households that cannot meet during standard business hours.

Homeowners comparing solar panel providers across the region frequently encounter multi-week gaps between an initial inquiry and a property evaluation. The expanded availability is intended to shorten that

window. Each consultation covers a review of current utility usage, an evaluation of the property, and a system design sized to the household's actual energy consumption rather than a standard template.

"Homeowners here want a straight answer about what a system will cost and what happens after they sign," said Denae Davis, Office Manager at North Valley Solar Power. "Expanding the consultation schedule means a family in Antioch can get that assessment within a day instead of waiting weeks. We design the system, we manage the permitting and the coordination, and we stay with the project through activation."

The company operates as a solar design and project management company. Its scope covers energy assessment, system design, financing coordination, permitting, project scheduling, inspection management, activation and ongoing performance monitoring. Physical installation work is performed by a licensed sister company. Following activation, the Antioch team monitors system output and responds to service requests from the same local office that handled the original design.

System design work uses satellite imagery and shade modeling to size each array to a roof's specific orientation, pitch and shading conditions. That approach produces designs matched to a household's twelve-month usage history rather than to a fixed package. Financing coordination is handled through established lending relationships including GoodLeap and Travis Credit Union, with the company managing the paperwork and timelines on the homeowner's behalf.

Selecting a solar company involves scheduling, permitting and utility interconnection steps that can extend across several months. The company's project management role is intended to consolidate those steps under a single local point of contact, with status updates provided at each stage rather than on request. Local familiarity with Contra Costa County permitting offices and utility requirements supports faster movement between milestones.

The Antioch office also supports surrounding communities served by nearby company offices in Stockton, Concord and Pleasanton. The company is a member of the Better Business Bureau and maintains aggregated customer reviews across its California locations. Homeowners evaluating a solar company for a residential project can review service details and request a consultation through the Antioch location page.

The Antioch expansion follows continued residential demand across the Delta corridor, where utility rate structures and net billing rules have prompted households to reassess on-site generation. The company reports that consultation volume from eastern Contra Costa County drove the decision to extend appointment windows at the Lone Tree Way office.

About North Valley Solar Power

North Valley Solar Power is a locally owned and operated solar design and project management company serving communities throughout Northern California. The company designs right-sized residential solar systems and manages each project from initial consultation through utility approval and long-term support. Its offices are staffed by teams living in the communities they serve, and each project is coordinated through a single local point of contact from design through activation and ongoing monitoring.
