

822 Heat and Air Expands Commercial HVAC Installation and AC Service and Repair Offerings

September 25, 2026

Benbrook, TX - September 25, 2026 -

822 Heat and Air, a heating and air conditioning contractor serving Cedar Hill, Texas and the surrounding Greater DFW Metroplex, has expanded its commercial HVAC installation capabilities alongside its established residential and commercial repair services. The expansion reflects growing demand for complete system installations among both large-scale commercial properties and residential homeowners across North Texas.

The company specializes in full HVAC installation for commercial and residential customers, handling projects that range from seasonal maintenance and tune-ups to complete diagnostic work and system replacement. With the expanded focus, the firm now dedicates additional resources to commercial building projects that require personalized heating, cooling, and ventilation solutions.

As part of its service lineup, the company continues to provide Cedar Hill AC service that covers routine inspections, targeted repairs, and full replacements. Technicians address common issues such as refrigerant

recharging, condenser and coil servicing, and ductwork installation and maintenance, all of which contribute to energy efficiency and indoor comfort throughout the year.

"The decision to expand commercial installation came from what technicians were seeing in the field," said David, speaking for 822 Heat and Air. "More commercial property owners were reaching out for complete system installs rather than one-off repairs, and the team was already equipped to meet that need. Formalizing the expansion allows those projects to be handled with the same attention residential customers have come to expect."

The company operates as a licensed and insured HVAC contractor, holding license number TACLA65080C. Its trained technicians serve both residential and commercial clients, and the firm maintains emergency AC repair availability for customers facing sudden system failures during peak cooling months.

Beyond installation, 822 Heat and Air handles AC tune-up service designed to keep systems operating at peak efficiency. Regular tune-ups can help prevent breakdowns, improve energy performance, and extend the lifespan of existing units. Technicians conduct thorough inspections and tune-ups ahead of the cooling season to prepare systems for heavier use.

"Commercial and residential customers have different requirements, but the underlying goal is the same," David added. "Reliable comfort and efficient operation. The expanded installation capacity means the team can take on larger ductwork and full-system projects without extending timelines for the repair and maintenance work that keeps existing systems running."

The company serves a wide territory that includes Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, Midlothian, Duncanville, and neighboring suburbs. Financing options are available subject to credit approval and offer eligibility, with terms arranged directly between the customer and the chosen finance company.

822 Heat and Air is a professional HVAC company providing commercial and residential heating, ventilation, and air conditioning services throughout Cedar Hill and the Greater DFW Metroplex. The company offers commercial HVAC, residential HVAC, ductwork, and AC tune-up services, with a focus on energy-efficient solutions and year-round comfort for its clients.
