

822 Heat and Air Expands Commercial and Residential HVAC Services Across DFW

September 29, 2026

Benbrook, TX - September 29, 2026 -

822 Heat and Air has expanded its commercial and residential HVAC services throughout the Greater Dallas-Fort Worth Metroplex, broadening its capacity for complete heating and air conditioning installation for both large-scale commercial buildings and residential homes.

The expansion reflects growing demand across the DFW region for full-service HVAC contractors capable of handling everything from routine maintenance to ground-up system installations. As a licensed heating and air conditioning contractor, 822 Heat and Air serves commercial and residential customers who require complete installation, repair, and maintenance work.

The expanded offerings include installation, repair, and maintenance for commercial HVAC systems, along with residential system installation, diagnostics, and seasonal tune-ups. The company also continues to provide ductwork solutions, including inspection, sealing, and air duct replacement for homes and businesses where deteriorating or improperly designed ducts reduce system efficiency.

David, a company representative at 822 Heat and Air, noted that the expansion responds to the needs of property owners across the region. "Many homeowners and business owners across the Metroplex are managing aging systems and ductwork that no longer perform the way they should," David said. "Expanding across both the commercial and residential space allows the team to address the full scope of what a building needs, whether that means a system tune-up or a complete installation from the ground up."

Properly maintained ductwork plays a significant role in overall system performance. Even a high-efficiency furnace or air conditioner can perform poorly when ductwork is leaking, damaged, or poorly designed. Common issues include uneven heating or cooling between rooms, higher energy bills despite a well-maintained system, excess dust, and noisy or aging ducts. In cases where repair is not sufficient, air duct replacement restores proper airflow and supports energy efficiency throughout the building.

The company's technicians are licensed, insured, and EPA-certified. Their approach emphasizes thorough inspections, straightforward explanations, and upfront pricing, with no pressure to replace ductwork that can be effectively repaired. Diagnosis is provided before any repair begins, and the team works on all major brands and system types.

David added that transparency remains central to how the company operates. "The goal is to give property owners clear information so they can make informed decisions," David said. "That means honest diagnostics and recommendations based on what a system actually requires rather than a one-size-fits-all replacement."

Seasonal maintenance also factors into the expanded services. The company recommends tune-ups for air conditioners in the spring and for furnaces or heat pumps in the fall, and it offers seasonal maintenance plans and inspection reminders to help property owners stay ahead of potential breakdowns.

822 Heat and Air is a heating, ventilation, and air conditioning contractor serving the Greater Dallas-Fort Worth Metroplex and surrounding suburbs, including Crowley, Burleson, Benbrook, Granbury, Fort Worth, Arlington, and Dallas. The company provides commercial and residential HVAC services, including maintenance, repairs, full system replacements, ductwork solutions, and complete installations. The company operates under license number TACLA65080C and offers financing subject to credit approval and offer eligibility.
