All Pro CS Decks Expands Patio and Hardscape Services

November 05, 2026

COLLEGE STATION, TX - November 05, 2026 -
All Pro CS Decks, a deck-building and outdoor living contractor based in College Station, Texas, has expanded its patio and hardscape division to include a broader range of design and installation services. The expansion adds paver and flagstone patios, outdoor kitchens, fire features, retaining walls, and pergola construction to the company's existing deck-building services.

The expansion responds to sustained interest in outdoor living construction across the region, where homeowners have increasingly paired new decks with adjoining patios, shaded structures, and masonry features. Continued residential and multifamily construction in the area in recent years has widened demand for coordinated outdoor living projects rather than single-structure additions, and regional summer heat has added to interest in covered outdoor spaces as an extension of existing decks. All Pro CS Decks identified hardscape work as a recurring request from clients planning larger outdoor renovations.

The company previously concentrated primarily on wood and composite deck construction for residential clients in the area. Company leadership determined that a growing share of deck clients were also requesting patios, outdoor kitchens, and other hardscape features for the same property, prompting the decision to bring

those services in-house rather than referring the work to outside contractors. The change allows a single project team to plan and build decking, patio, and landscape elements under one contract.

"A deck is often just one piece of what a homeowner wants for an outdoor space," said Hector Garcia, Owner of All Pro CS Decks. "Bringing patio and hardscape work into the same company allows a project to be planned and built as one connected space rather than several separate jobs."

The added service categories are designed to integrate with existing or planned deck construction, using coordinated materials and layouts so a property's outdoor structures share a consistent design. Hardscape work is available as a standalone project or combined with new or existing deck construction. Site-specific factors such as slope, drainage, and material availability inform the final scope of each project.

The hardscape division is available to both residential and commercial property owners, including multifamily communities, homeowners associations, and businesses seeking patio or outdoor seating construction. Commercial hardscape projects follow a similar design consultation process, adjusted for site access, local code requirements, and project scale.

Each hardscape project begins with an on-site design consultation, a step the company had previously applied only to deck construction. The consultation includes a review of site drainage, grading, and any permitting requirements specific to Brazos County before installation begins. Project timelines vary by scope, and most patio and hardscape installations are scheduled separately from, though often adjoining, a client's deck construction timeline.

Bringing hardscape construction in-house required additional crew training and new equipment to bring patio and masonry work to the same construction standard the company applies to its deck projects. Materials for patio and hardscape projects are sourced from regional suppliers, and each installation is built to the same warranty standard the company applies to its deck construction. All Pro CS Decks now maintains dedicated crews for hardscape installation alongside its existing deck construction teams.

Garcia said the decision to add hardscape services was shaped by repeated requests from existing deck clients who wanted matching patios, fire pits, or outdoor kitchens installed alongside their deck project. The expanded division is positioned as an extension of the company's existing project process, with the same design and construction team overseeing both deck and hardscape work for a given property.

The expanded patio and hardscape services are available for consultation and scheduling for both new clients and homeowners with existing All Pro CS Decks projects. Additional details about the design process,

service area, and hardscape project types are provided on the company's website. For more information, visit https://deckbuilderscollegestation.com/patios-and-hardscapes/.
