

Lightning Quick Signs Expands LED Parking Lot Lighting Services Across Mississippi Gulf Coast

September 29, 2026

Waveland, Mississippi - September 29, 2026 -

Lightning Quick Signs, LLC has expanded its commercial lighting offerings by bringing LED parking lot lighting to businesses throughout Gulfport, Biloxi, Ocean Springs, Pass Christian, and Pascagoula. The family-owned company, in operation since 1996, is responding to growing demand from Gulf Coast property owners seeking energy-efficient lighting solutions that improve safety and visibility during evening hours.

The expanded service covers both retrofits of existing fixtures and new installations for commercial properties of all sizes, ranging from large retail centers to small local restaurants. The company provides a broad selection of lighting products, including wall packs, high bays, low bays, and flood lights, along with 24-hour emergency service across the region.

Well-lit parking areas improve safety and security for customers and employees while reducing energy costs for property owners. Lightning Quick Signs approaches each project with turnkey expertise that spans product selection, lighting placement, installation, and ongoing repair. The company partners with established

manufacturers to source LED products designed for durability and energy efficiency.

"Property owners along the Gulf Coast are recognizing how much a properly lit parking area affects both safety and operating costs," said Gary Knoblock of Lightning Quick Signs. "Expanding these services into communities like Gulfport, Biloxi, and Pascagoula allows the company to meet a need that continues to grow across the region."

The expansion reflects a broader shift among commercial businesses toward LED technology, which consumes less energy than traditional metal halide and high-intensity discharge systems while providing consistent illumination. For many property owners, replacing aging fixtures with modern LED equipment represents a practical response to rising utility expenses.

Knoblock noted that attention to regulatory compliance remains central to each installation. "Every project follows local codes and careful planning to prevent any risk to a client's facility," he said. "The goal is straightforward work that stands up over time and serves the community well."

Beyond parking lot lighting, Lightning Quick Signs maintains a full range of signage services, including digital LED displays, pylon and wall signage, lighted dimensional and channel letters, sandblasted and textured monument signs, vehicle wraps, vinyl lettering, and banner signs. This diversity allows the company to serve as a single source for businesses managing both their signage and exterior lighting needs.

Businesses across the Mississippi Gulf Coast interested in evaluating their lighting can contact our team of experts today to arrange a consultation and cost estimate. The company can be reached at 228-467-1718.
