

Concrete Commandos Frisco Contractor Referral Service Establishes New Location in Frisco, Texas

September 22, 2026

FRISCO, TX - September 22, 2026 -

Concrete Commandos Frisco has established a new location at 8250 Dallas Pkwy, Frisco, TX 75034, creating a local point of contact for property owners across the North Texas region who are researching concrete projects and seeking to connect with independent concrete contractors. The Frisco location functions as a referral service, linking residential and commercial property owners with qualified, independent contractors who perform the concrete work.

The new location anchors the company within the community it serves and provides a recognizable place for property owners in Frisco and nearby areas to begin evaluating their projects. Rather than performing construction directly, Concrete Commandos Frisco focuses on connecting property owners with independent contractors, who remain responsible for the workmanship, licensing, and execution of each project.

Through the company website, property owners can review a range of concrete project categories. These include concrete driveways, stamped concrete driveways, decorative concrete patios, foundations and slabs,

pool decks and surrounds, concrete flatwork and walkways, and concrete repair and resurfacing. Each category addresses a different property need, from expanding outdoor living areas with patios and pool decks to restoring aging surfaces through repair and resurfacing, offering concrete solutions for North Texas properties at various stages of planning.

Local conditions play a meaningful role in how concrete projects are evaluated in the region. Soil composition, subgrade compaction, drainage, reinforcement requirements, site access, and applicable municipal building requirements can all influence how a project should be approached. Because these factors vary from property to property, the company emphasizes that no single specification applies universally, and that site-specific evaluation is an important part of the planning process.

"The Frisco location gives property owners a clear starting point when they begin researching a concrete project," said Todd Dobson, spokesperson for Concrete Commandos Frisco. "The role is to help connect people with independent contractors who understand the conditions found across North Texas, so property owners can make informed decisions about their projects."

Dobson noted that the referral model is intended to simplify the early stages of a project. "Property owners often have questions about where to begin. Serving as a point of contact and directing them toward qualified, independent contractors is the focus," he said.

The Frisco location supports property owners throughout the surrounding North Texas communities. The company lists service areas that include Plano, McKinney, Allen, Little Elm, Prosper, Celina, The Colony, Lewisville, Denton, Carrollton, Richardson, Fairview, Aubrey, Cross Roads, Pilot Point, Sanger, Krum, Argyle, and Northlake. Coverage described on the website spans Collin and Denton counties and the broader North Texas and DFW northern corridor, giving property owners across the area access to concrete project options in Frisco and surrounding areas.

Concrete Commandos Frisco operates as a referral service based in Frisco, Texas, connecting residential and commercial property owners with independent concrete contractors across North Texas. The company presents a range of concrete project categories through its website and serves as a local point of contact for those researching and planning concrete work.
